Change in

In Table
is divided
capital goo
ing since it c
The series repre
activity and a more specific name like "machinery", would be preferable. About 85 per cent of the series is composed of items, such as agricultural implements, household, office and store machinery, machine tools, industrial machinery and heavy electrical equipment and machinery. The new name of "machinery" is used in the above-mentioned tables and also in page S-6.

Months for Cyclical Dominance (MCD)

The user will find this expression in abbreviated form in several tables throughout this publication.

ie measure indicates the number of months required
the average for emergence of the cyclical trend
m the seasonally adjusted series. An MCD of five
plies that a five-month moving average is required
order to offset irregular movements and allow examination of the underlying cyclical trend.

The MCD is used in Tables 11, 12, 17, 40, 41, 42, 43, 74 and 82, to indicate the relative variability of the series. Its value can range only from one to six months, since values greater than this are not calculated. In the S section, for series with an MCD of four or more, five-term moving averages are used to aid in charting. These averages are correct for series with an MCD of five, but for MCD's of four or six they are used as approximations to avoid the problem of centering even-term averages. The MCD is not charted for series with values of three or less, since it does not increase the clarity of the charted series.

THE GROWTH OF POPULATION IN CANADA

Canada's population stood at 18,238,000 in 1961 as against 10,377,000 in 1931 and 5,371,000 in 1901. That is to say, population doubled in the first thirty years of this century and increased another 75 per cent in the next 30 years. The increase in the last censal decade was one of over 4,000,000, or 30.2 per cent.

The growth of population in Canada may be seen in the perspective of trends in the world as a whole. According to United Nations reports world population, rising from about 1½ billion at the beginning of the century to almost 3 billions in 1960, almost doubled in six decades; the growth was especially marked in the period since the second world war.

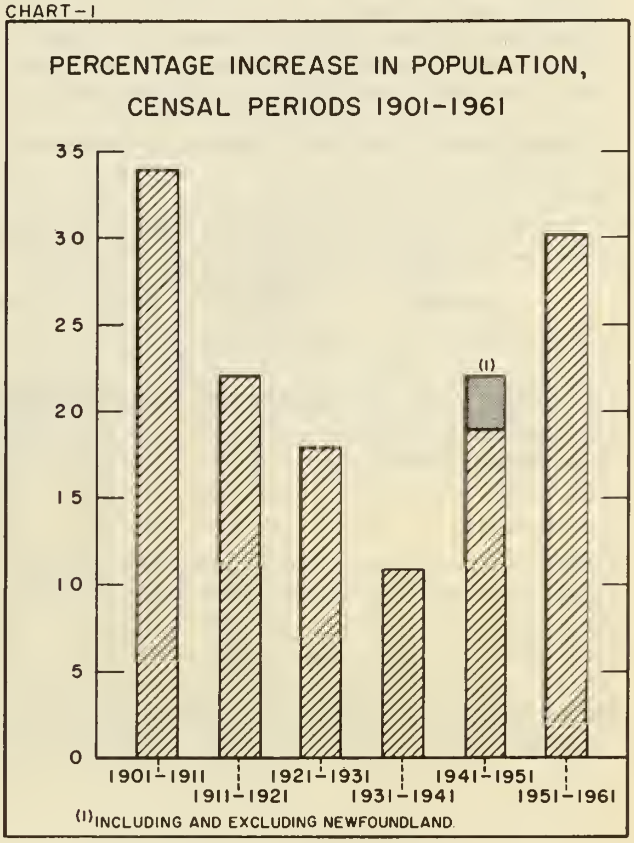
In the first decade of this century, the gain of 34 per cent in population in Canada was greater than in any censal period up to 1961. Growth was associated with the opening up of the West for settlement and massive immigration from overseas. In the period 1901 to 1911 about 1,760,000 immigrants entered the country. Natural increase is estimated at about 1 million. Since the total increase in population in the period was 1,835,328, it is evident that there was substantial emigration.

In the next censal period, the growth of population dropped sharply to 22 per cent. Military losses in the First World War and losses during the influenza epidemic, which together amounted to about 120,000, were a factor in this drop. Although the flow of immigrants was reduced during the war years, immigration during the years immediately preceding the war had been extremely heavy, with the result that the number of immigrants — 1,612,000 — was not much less than in the preceding censal period. Emigration is estimated to have been at an all-time high. The increase in population amounted to 1,581,306 which represents 2 per cent per annum, as against 3 per cent in the preceding period.

In the 1921-31 censal period, the rate of increase in population fell again — to 18 per cent. The number of immigrants fell to 1,200,000 and it is estimated that the number of emigrants reached about 1,000,000. The increase in population amounted to 1,588,837, only 229,000 greater than the natural increase. Another feature of this period was the rapid growth of population in Western Canada partly the result of immigration and partly the result of the influx of people from the Eastern provinces of Canada.

The rate of growth of population fell drastically in the period 1931-41. The increase was only 10.9 per cent, or 1 per cent per annum. In the depressed conditions of the thirties immigration was sharply curtailed and marriage and birth rates dropped significantly. The number of immigrants was only 150,000 persons; in addition it was supplemented by the estimated 75,000 Canadians returning from the United States. Emigration, estimated at 250,000 likewise fell sharply. The natural increase was only 1,220,000. The crude birth rate fell from 27 per thousand of population in the 1921-25 period to 24 per cent in the succeeding four-year period and then to 20 per thousand during much of the 1931-41 censal period.

CHART-1



The rate of growth of population was restored to pre-depression levels in the decade 1941-51; excluding Newfoundland, it amounted to 19 per cent, and including Newfoundland, to 22 per cent. Much of the increase took place in the second half of the decade, reflecting heavy post-war immigration and the sharp rise in the marriage and birth rates in the immediate post-war period. Of the 548,000 immigrants, 464,000 arrived in the second half of the decade and of the 1,972,000[1] natural increase 1,200,000 took place in that period.

Factors in Population Growth 1951-61

In the census period 1951-61 the population growth rate came close to approaching the extremely high rate of the first decade of the century when the West was being opened up for settlement; the rate of increase was 30.2 per cent, which compares with one of 34 per cent in the earlier period. But the two periods contrast in many ways. In the early period there was a wider dispersal, as whole regions across the continent were opened up. In contrast, in the recent period, there was a concentration of growth in urban communities although there was also some further spreading of population into newly developed northern areas.

---

[1] Exclusive of Newfoundland.

The rate of natural increase remained steady at approximately 20 per 1,000 of population during the decade and compares with one of 16 in the 1941-51 period and 11 in the 1931-41 period. Natural increase accounted for about three-quarters of the growth of population between 1951 and 1961. While there was some decline in the death rate, the trend in the rate of natural increase reflects very closely changes in the crude birth rate, which began to rise during the war, and remained at the high rate of 28 in most of the period 1951-61 compared with one of 21 at the outbreak of war. It has been estimated that about 70 per cent of the rise in the birth rate between the 1941 and 1956 censuses was due to the sharp increase in the percentage married and about 30 per cent to higher fertility within marriage.

Net immigration accounted for about 25 per cent of the increase in population in the years 1951 to 1961, the percentage rising to 30 per cent in the first half of the decade and falling to 20 per cent in the second. During the decade 1,542,853 immigrants entered the country, more than double the estimated emigration.

TABLE I. Factors in the Growth of Population of Canada and the Provinces, 1951-61

Province	Population 1951 Census	Births	Deaths	Natural increase	Immigration	Actual increase	Net migration	Population 1961 Census
Canada	**14,009,429**	**4,468,340**	**1,320,142**	**3,148,198**	**1,542,853**	**4,228,818**	**1,080,620**	**18,238,247**

Population Growth by Provinces, 1951-61

The provinces did not share equally in the growth of population between 1951 and 1961. While all provinces gained in population the rates of increase varied widely. The greatest increases resulted from a combination of natural increase and net migration which in the two large provinces of central Canada and the two most westerly provinces accounted for over 87 per cent of the total national increase. In contrast, increases in the other six provinces, which include the four Atlantic Provinces and the two Eastern Prairie Provinces, were entirely due to natural increase.

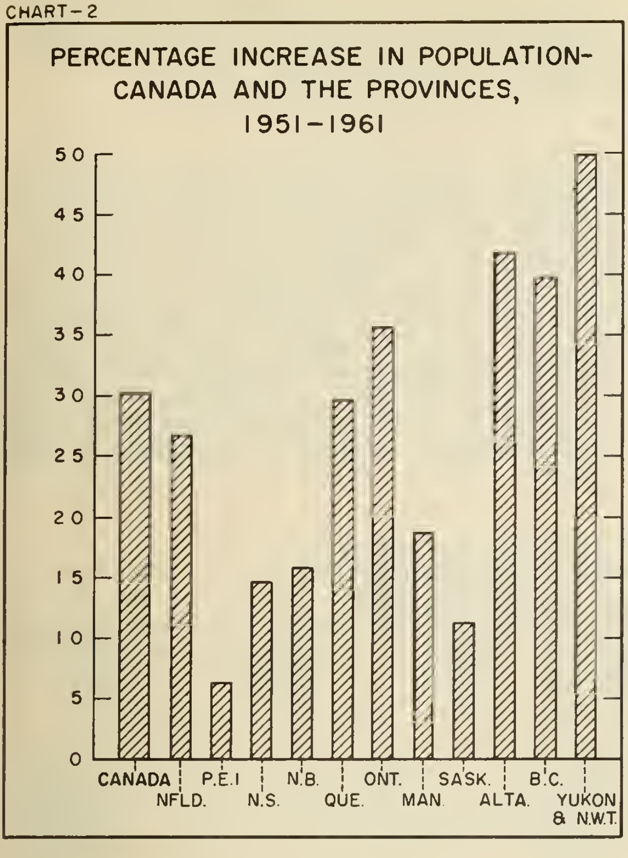
The most rapid rates of growth were in Alberta, 41.8 per cent, and British Columbia, 39.8 per cent. The estimated net migration of 240,000 into British Columbia accounted for a little over half the increase in population in the censal period; over 50 per cent of the migration was interprovincial and the balance immigration. Almost a third of Alberta's growth was due to net immigration and the balance to natural increase which was at a higher rate than any province except Newfoundland.

Ontario's population increased 35.6 per cent between 1951 and 1961, and out of an increase of 1,639,000 some 685,000 is accounted for by net migration. The number of immigrants who gave Ontario as their province of destination during the decade numbered 817,000, well over half of all immigrants to Canada during the period. The birth rate in Ontario in the period 1951 to 1961 was just over 26 per thousand compared with around 22 in the preceding decade.

The rate of population growth in Quebec was approximately 30 per cent, close to the national average. Natural increase accounted for close to 1 million of the total gain of 1,203,530 and net migration for the balance. The birth rate declined from around 30 in the first half of the decade to 26.1 in 1961

Newfoundland's population increased 26.7 per cent in the decade, all of this gain being attributable to natural increase. The province is estimated to have lost about 14,000 people through net migration. The birth rate in Newfoundland, which averaged 34 per thousand during the period 1951 to 1961, was considerably higher than elsewhere in Canada.

CHART-2



PERCENTAGE INCREASE IN POPULATION-CANADA AND THE PROVINCES, 1951-1961

The population of Manitoba increased by 18.7 per cent. In contrast to the preceding censal period there was very little net loss from migration so that the province held almost all its natural increase. On the other hand, Saskatchewan continued to lose by net migration and the increase in population in the decade was only 11.2 per cent. The loss from net migration is estimated at 79,000 which followed a larger loss of 200,000 in the preceding censal period.

Population grew only moderately in Nova Scotia and New Brunswick. In both provinces the gain was around 15 per cent. As in the preceding decade, both provinces lost by net migration. The birth rate in New Brunswick dropped from 31 per thousand in 1951 to 27 in 1960. In Nova Scotia the birth rate remained steady at around 27 per 1,000.

Prince Edward Island likewise continued to lose population by net migration and the increase in population in the decade was only 6.3 per cent. Next to British Columbia, the rate of natural increase was the lowest in Canada, this province having the highest death rate in Canada.

With increases in population of 60.8 and 43.7 per cent respectively, the Yukon and Northwest Territories had very high rates of growth. Owing to higher birth rates, expecially among the Indian and Eskimo population, the rate of natural increase was above the rates recorded for the rest of Canada.

Growth in Population of Incorporated Cities, Towns and Villages over 1,000 in Population 1901-61

Along with growth has gone an increasing concentration of population in urban areas. In 1901 the 324 incorporated cities, towns and villages accounted for 34.6 per cent of the Canadian population but in 1961 the 922 such centres accounted for 58.3 per cent of the population.

TABLE II. Per Cent of Total Population of Canada, Residing in Urban Areas, classified by Size of Groups: 1901-61

Year	Total group	100,000 +	30,000 to 99,000	5,000 to 29,999	1,000 to 4,999
1901	34.6	8.9	6.4	9.2	10.1
1911	41.7	15.0	6.8	10.9	9.0
1921	45.3	18.9	5.6	12.1	8.7
1931	49.7	22.4	6.7	12.6	8.0
1941	50.9	23.0	8.1	11.9	7.9
1951	54.4	23.9	8.0	14.2	8.2
1956	55.7	23.4	8.6	15.9	7.8
1961	58.3	22.8	12.1	15.9	7.5

All size groups except the smallest — 1,000 to 4,999 — showed an increased proportion of the incorporated urban population. The smallest accounted for 29.3 per cent of the incorporated urban population in 1901 and only 12.9 per cent in 1961. The largest increase in the period was in the category of 100,000 and over which rose from 25.6 per cent of the incorporated urban population in 1901 to 39.1 in 1961.

Since 1951 both the largest and the smallest size groups have declined consistently as a proportion of the total incorporated population over 1,000. The proportion of the incorporated urban population in the largest size group of 100,000 and over was 44.0 per cent in 1951, 42.1 per cent in 1956 and 39.1 per cent in 1961. This is explained in part by the increasing importance of the suburbs outside the incorporated boundaries of large centres. Despite the relative decline of this size group it still accounted for 22.8 per cent of the Canadian population in 1961.

Growth of Population of Census Metropolitan Areas 1941-61

In Canada, as in other countries, urbanization has accompanied industrialization. The proportion of urban to rural population has been steadily increasing and in addition there has been an increasing proportion of the urban population residing in the larger cities and metropolitan areas. (Table III). As stated above, almost 40 per cent of the population resided in cities of 100,000 and over in 1961, compared with only one quarter in 1901.

Prior to the 1951 Census, any community that was not incorporated as a city, town or village was classified as rural. Since 1951 the definition of urban has been changed to include all communities of 1,000 or more, irrespective of incorporation as a city, town or village. In addition, all population living within defined metropolitan areas surrounding the larger cities was defined as urban. For census purposes, metropolitan areas are those cities having well defined satellite communities outside the boundaries of the city proper but which are in close socio-economic or geographical relationship to them or both.

TABLE III. Relationship of Census Metropolitan Area Size to its Rate of Growth, 1956-61: Areas of 1961

Metropolitan area	Ranked rate of growth	Rank in numerical size	Size group in 1956[1]	Population in 1961
Calgary	38.8	9	2	279,062
Edmonton	32.5	8	2	337,568
Ottawa	24.4	5	2	429,750
Toronto	21.5	2	1	1,824,481
Montreal	20.9	1	1	2,109,509
Kitchener	20.3	13	3	158,864
Vancouver	18.8	3	1	790,165
London	17.4	12	3	181,283
Hamilton	16.8	6	2	395,189
Winnipeg	15.5	4	2	475,989
Victoria	15.2	14	3	154,152
Quebec	14.8	7	2	357,568
St. John's	14.8	17	4	79,153
Sudbury	13.0	15	4	110,694
Halifax	12.0	11	3	183,946
St. John	11.1	16	4	95,563
Windsor	4.0	10	3	193,365

[1] 500,000 + = 1; 200,000-499,999 = 2; 100,000-199,999 = 3; 50,000-99,999 = 4.

In 1941, twelve metropolitan areas were designated and in 1961, seventeen. In the earlier period metropolitan areas included 32.5 per cent of the total population and in 1961, 44.8 per cent. Over the last decade the seventeen metropolitan areas recorded a population increase of 44.8 per cent.

Montreal and Toronto together accounted for 47.6 per cent of all metropolitan population in 1951 and in 1961 for 48.2 per cent. In both centres the city proper accounted for very little of the growth; most of the increase was in the "other" metropolitan area, that is, the suburbs that had grown up around them.

It is worth noting that the growth in the metropolitan areas of Calgary and Edmonton has been exceptionally rapid. In the decade 1941-51 when the rate of growth for the total metropolitan group was 27 per cent, the rates of growth for Calgary and Edmonton were 49.5 per cent, and 76.9 per cent respectively. In 1951-61 the corresponding figures for the metropolitan population as a whole was 44.8 and for Calgary and Edmonton 96.1 per cent and 91.0 per cent respectively.

Rural and Urban Population

In 1961, approximately 70 per cent of the population resided in urban areas as compared with 67 per cent and 68 per cent at the 1956 and 1951 Census. The rural farm population accounted for just over 10 per cent of the population, of whom about two-thirds resided in villages and non-farm communities, while one-third resided on farms. Part of the decline in the farm population is accounted for by a change in the definition of the farm in the 1961 Census.

Canadian Statistical Review, July 1962

ERRATUM

The final paragraph in the article, "The Growth of Population in Canada" in the July issue of the Canadian Statistical Review, should be replaced by the following paragraph:-

> In 1961, 12,700,390 persons, or approximately 70 per cent of the total population, resided in urban areas as compared with 67 per cent and 63 per cent at the 1956 and 1951 Census. About three-fifths of the rural population resided in villages and other non-farm communities and two-fifths on farms. Thus, just over 10 per cent of Canada's population resided on farms in 1961. The farm population declined from 2,769,286 to 2,072,785 between 1951 and 1961, or 25.2 per cent. Part of this decline is accounted for by a change in the definition of the farm in the 1961 Census.

INDUSTRIAL PRODUCTION (More detail in Table 11)

Total industrial production rose for the fourth consecutive month. The increase from April to May was due to increases in the component series of manufacturing, mining, electricity and gas. Iron and steel, a component of durable manufacturing showed an increase of 2.3%.

		total industrial production	manufacturing production			mining production	electricity and gas	total iron and steel

RETAIL TRADE, MOTOR VEHICLE SALES (More detail in Tables 54 and 74)

Total retail trade in May was about unchanged from its April level.

Sales of new motor vehicles showed an upward movement of 9%, reflecting increases in sales of over 7% in American and European passenger cars and 18% in commercial vehicles.

		retail trade total	retail trade (ex. motor vehicle dealers)	motor vehicle dealers	department stores	new motor vehicle sales			
						total	American type passenger	European type passenger	total commercial

CONSTRUCTION (More detail in Tables 60, 61 and 63)

Total building permits in May increased 10%, primarily on the strength of a large increase in non-residential building permits.

Total starts rose by 7% in June, whereas completions were off by 8%. Starts of single family units decreased for the fourth consecutive month.

	value of building permits			new dwelling construction, centres 5,000 and over

MANUFACTURING INVENTORIES, SHIPMENTS, ORDERS (More detail in Tables 42 and 43)

Inventories and unfilled orders rose fractionally in May to their high levels of March. Total new orders decreased slightly; one of its components, new orders for machinery rose by 8%, while another, new orders for construction goods decreased by 12%. Total shipments also fell but shipments of primary iron and steel rose modestly for the fifth consecutive month.

		all industries				new orders mochinery	new orders construction goods	shipments primary iron and steel	ratio of inventories to shipments
		owned inventories	shipments	new orders	unfilled orders

---

[1] Prior to the census in 1961, population estimates were made quarterly on March 1, June 1, September 1 and December 1, and in addition on July 1 and January 1 of each year. After the 1961 census the quarterly estimates will be made on January 1, April 1, July 1 and October 1, as well as June 1. [2] Figures for births, marriages and deaths for 1961 and 1962 are provisional and represent registrations filed in provincial vital statistics offices during the month under review, regardless of the month of occurance. These figures are exclusive of the Yukon and the North-West Territories. Births and deaths are also exclusive of stillbirths.

Sources: Vital Statistics (84-001), D.B.S. and Department of Citizenship and Immigration.

Total 6: national income and gross national product in current dollars

years and quarters		salaries wages and supplementary labour income	military pay and allowances	corporation profits before taxes and before dividends paid to non-residents	deduct: dividends paid to non-residents	rent, interest and miscellaneous investment income	accrued net income of farm operators from farm production[1]	net income of non-farm unincorporated business	inventory valuation adjustment	net national income at factor cost	indirect taxes less subsidies	capital consumption allowances and miscellaneous valuation adjustments	gross national product at market prices[2]

[1] Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. [2] Includes residual error of estimate. Source at bottom of Table 10.

[1] The statistics for individual industries exclude strikes involving less than 100 workers. The total for all industries continues to include all strikes.
[2] The annual and monthly "all industries" totals for 1960 and 1961 have been revised and are no longer quite comparable with the data for individual industries, apart from the difference described in footnote 1. **Source: Labour Gazette, Department of Labour.**

[1] Seasonal (formerly supplementary) benefit data included. [2] On last working day of month; claimants formerly classified as "short time" and temporary lay-off are included. [3] Estimates are based on average weekly number of payments. [4] The number of calendar weeks during which a benefit payment was made. [5] Commencing March 1961, data relate to the last working day of the month. Previous to that date statistics are for the Thursday nearest the end of the month. [6] Excludes fishing claimants during the seasonal benefit period. **Source: Statistical Report on the Operation of the Unemployment Insurance Act, (73-001), D. B. S. and Labour Gazette, Table D-1.**

[1] The data in Tables 17 to 27 are based on reports from employers usually employing 15 persons and over and covering the respondents last pay period(s) in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and domestic service. [3] Includes storage and communication. [4] Includes insurance and real estate. [5] Excludes public administration and defence and such community services as health and education. **Source: Employment and Payrolls, (72-002), D.B.S.**

[1] See footnote 1, Table 17. [2] See footnote 2, Table 17. [3] Employment indexes in manufacturing and in its durable and non-durable components are given in Table 17. [4] In addition to those listed, tobacco products, leather, printing and publishing and miscellaneous industries are included in non-durable manufacturing.

[1] These totals include all generating agencies producing over ten million kilowatt hours per year. [2] These columns include all generating utilities and generating industries respectively, producing over ten million kilowatt hours per year. [3] Less imports. [4] Total net generation less net exports. [5] Mainly the amount used in electric boilers. **Source: Electric Power Statistics, (57-001), D.B.S.**

[1] Monthly shipments represent an estimated projection of the latest available Census of Industry values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total manufacturing inventory owned by manufacturers including warehouse stocks. [3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [4] End of period. [5] Classified according to the Standard Industrial Classification. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.**

[1] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [2] Rough cords of 128 cu. ft. [3] Customs exports. [4] Mill shipments destined for export. **Sources: Pulpwood Production (25-001), Trade of Canada, Exports (65-004), D.B.S. Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.**

[1] Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Excluding shipments for re-processing at maker's own plants. [3] Imports include, in addition to all other shapes, ingots, cast iron pipe, wire and wire ropes. Imports exclude castings (except cast iron pipe), forgings, fittings and couplings. Source: Primary Iron and Steel (41-001), D.B.S.

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D.B.S.**

[1] Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area. [2] The data on building permits are collected for 1,100 municipalities and individual figures are available on request. Some of the annual totals for 1959 and 1960 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. **Source: Building Permits (64-001), D.B.S.**

[1] The coverage was extended to 507 municipalities in 1948, and as of 1961, stands at 1,100, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. **Source: Building Permits (64-001), D.B.S.**

[1] Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected.

[2] Planks and boards, flooring and square timber.

[3] Hollow blocks including fireproofing and load-bearing tile.

[4] For building insulation only.

[5] Figures cover the production of firms which normally account for 90 per cent of the total for Canada.

[6] Includes concrete chimney blocks, up to December 1959.

[7] Factory sales of firms which normally account for 96% of total Canadian production.

*See also Tables 18 and 19. [1] Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1961 are final prices. From August 1, 1961 to date, the western grain prices used in the index are initial prices only for wheat, oats and barley. [2] Includes subsidy on hogs. [3] Based on price for hogs including Dominion premium up to September 1960. A rise in ratio favours production of beef. [4] Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights. **Source: Coarse Grains Quarterly (22-001), Stocks of Meat and Lard (32-012), Index Numbers of Farm Prices of Agricultural Products (62-004), Livestock and Meat Trade Report, Dept. of Agriculture, D.B.S.**

[1] Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Revised to include bagged seed wheat previously excluded. [2] Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. [3] Annual data are monthly averages of crop year. [4] Includes eggs for hatching.

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted. [2] Includes stocks held by manufacturers, wholesalers and other warehouses. [3] The increase in percentage of capacity from October to November, 1960 reflects the fact that some mills worked more than the 25 days included in this formula as well as a reduction in total daily capacity from 171,000 hundredweight in October to 151,000 hundredweight in November. **Source: Grain Milling Statistics (32-003), Margarine Statistics (32-005), Quarterly Report on Processed Foods (32-007), D.B.S.**

---

[1] Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. [2] Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade. **Source: Retail Trade (63-005), D.B.S.**

Table 74: value of retail trade by types of business and provinces

monthly averages or months	lumber and building material	furniture, appliance and radio	restaurants	fuel dealers	drug stores	jewellery stores	miscellaneous	atlantic provinces	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia

[1] Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available. [2] Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. [3] Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. [4] Excluded from the above tabulation are charge accounts of motor vehicle dealers whose credit is extended mainly to businesses rather than to consumers. Instalment credit includes conditional sales agreements only. [5] Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds. [6] Figures for dates other than year ends are estimated on the basis of the loans by twelve companies. **Source: Department of Insurance, Department of Agriculture, Bank of Canada.**

[1] As from January 1958 the indexes, the imports total and the "miscellaneous commodities" total exclude various non-commercial and special transactions previously included in our imports totals. For a more detailed explanation see Trade of Canada (Exports) 1960. [2] Includes pigs, ingots, blooms and billets, castings and forgings, ferro-alloys and rolling mill products. **Source: Trade of Canada, Imports (65-007), D.B.S.**

Table 81: merchandise imports—concluded

[1] Data in this table refer to railways with annual operating revenues of $500,000 or over. Monthly averages for 1960 and 1961 differ from the sum of the monthly data due to revisions which cannot be allocated by months. [2] As of January, 1958, statistics include the British Columbia Electric Railway. [3] As of January, 1958, the Hudson Bay Railway has been absorbed into the Canadian National Railway system. [4] Includes January to July interim payments related to recommendations of the Royal Commission on Railway Transportation. **Source: Railway Operating Statistics (52-206), D.B.S.**

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and undivided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [6] Excluding Canadian day to day loans. [7] Loans to grain dealers and exporters. [8] Loans to finance purchase of Canada Savings bonds at time of issue. [9] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. [10] Including loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

[1] Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks. [2] Subsidiary coin issued by the Mint less coin held by Bank of Canada and chartered banks in Canada. [3] Less total float, i.e. cheques and other items in transit (net). [4] At September 30, 1957, the deposit balances of religious, educational and welfare institutions used for business purposes, about $140 million, were reclassified from "personal savings deposits" to "other notice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date. Source: Statistical Summary of Bank of Canada.

Note: This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales. [1]The Canada totals by months for 1960 and 1961 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1960 and 1961 nor the monthly averages for 1961 have been revised to agree with the Canada total. **Source: Monthly Survey of Life Insurance Sales in Canada, Life Insurance Agency Management Association, Hartford, Conn.**

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (excluding government-owned companies and incorporated co-operatives). [1] Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction. [2] Includes, in addition to the industries listed, Tobacco and Leather. **Source: Corporation Profits (61-003), D.B.S.**

A NOTE TO USERS

Changes in this Issue:

(1) Population statistics for Canada and its provinces have been revised back to June 1956 to comply with new benchmarks data established following the population census of June 1961. Commencing with July 1961, the method of reporting population statistics was changed from six to five periods a year. Estimates will now be available at the first day of every quarter, that is January 1, April 1, July 1, October 1 and, also, June 1 to maintain comparability with the census figures.

(2) Births, deaths and marriages by provinces, in Tables 3, 4 and 5, respectively, have been revised for the year 1961.

(3) A new table, (Table 57), entitled "Building Permits by Type" is introduced in this issue. It carries seasonally adjusted as well as unadjusted data for residential, industrial, commercial and institutional and government building permits. As a result of this introduction there has been some rearrangement and renumbering of tables.

(4) In Table 83, the seasonally adjusted data of exports and imports, for the European Common Market, the European Free Trade Association and the O.E.C.D. have been revised for the period 1946 to date.

Back Records:

The back records for the series mentioned in items 3 and 4 above are available on request from the Current Economic Indicators Section, National Accounts and Balance of Payments Division.

Annual Subscription: $5.00 — Single copies: 50c. each

This review and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications, may be ordered from the Information Services Division, Dominion Bureau of Statistics, Ottawa, Ontario, and remittances made payable to the Receiver General of Canada.

TRAVEL BETWEEN CANADA AND OTHER COUNTRIES

Canadians love to travel, and generally rising incomes in recent years have made it increasingly possible for them to do so. In 1961 with a population of 18 million some 30 million visits were made to other countries during the year, which represents on a per capita basis 1¾ visits a year to another country for every man, woman and child in the country. To contrast with the United States, Canadian visits there totalled 29.3 million during the past year as compared with 30.5 million reciprocal visits from the 185 million residents of the United States. Furthermore, many groups of Canadian residents, partly because of the severity of the winter and the wide regional choices open to them throughout the year stay away longer than their American counterparts.

Expenditures by Canadians on international travel have grown very rapidly. Between 1950 and 1960 when gross national product approximately doubled, and consumer expenditure and disposable consumer income rose approximately 95 per cent, expenditures on foreign travel rose no less than 177 per cent. In 1960 travel expenditures represented 1.7 per cent of gross national product, 2.7 per cent of consumer expenditure and 2.5 per cent of disposable consumer income. These relationships remained virtually constant between 1955 and 1960.

A prominent feature of the travel account in recent years is the dramatic increase in travel overseas. This is associated with higher discretionary incomes, improvements in techniques of transportation, cheaper fares, better facilities for tourists abroad and the presence of a large immigrant population eager to visit their homelands. Between 1950 and 1960 payments for overseas travel rose from $33 million to $165 million, that is, a five-fold increase, while payments for travel to the United States rose from $193 million to $462 million, or about 140 per cent.

The travel account is an important element in the balance of payments. Table I shows the travel account in relation to the current international account for the five year period 1956 to 1961. On the average over that period payments to abroad on travel account accounted for 7 per cent of all payments. On the other hand, receipts from abroad amounted to more than 5 per cent of all receipts. The deficit on travel amounted to no less than 14 per cent of the total.

As can be seen from Table II, the travel account with overseas, although much smaller in magnitude than the account with the United States, has recently been the source of the major part of the deficit. Thus in 1960 out of a deficit on travel account of $207 million, $120 million was on account with overseas countries.

The following sections describe patterns of travel of Canadians travelling abroad and of non-residents travelling in Canada. Since data for 1961 are at present incomplete, the facts and figures quoted are based on data for the year 1960.

[1] Subject to revision.

Canadian Travel in the United States

In 1960 a record number of 29 million Canadians returned from the United States, of whom an estimated 52,000 were Canadians returning from overseas. Travel expenditures were also at an all-time high of $457 million. This total is much greater than the United States receives from all overseas countries.

About 80 per cent of the Canadian travellers stayed less than 24 hours. The twenty per cent of the travellers who were away over 24 hours accounted for 87 per cent of the expenditure and in the case of motorists those away 48 hours and over accounted for 41 per cent of the expenditure. It may be noted that the privilege of $100 customs exemption applies only to travellers whose stay is 48 hours or over. Over 80 per cent of the travellers entered the United States by car, about 15 per cent were pedestrians or travelling on local buses, and the remainder used other means of transportation.

Turning to consider the purpose of travel, 45 per cent of travellers reporting one purpose only visited the United States for recreational reasons, 31 per cent to visit friends and relatives, over 12 per cent for business reasons, over 7 per cent for shopping, and the remainder for study, health and other reasons. This and the other comments immediately below are limited to travellers who had been away 48 hours or more.

The longest duration of visits was by persons who went to the United States to study; their stay averaged 67.8 days in 1960. The second longest stay — 50.6 days — was by persons who travelled for health reasons. Visits to friends or relatives averaged about 11 days as did visits for recreation; business trips averaged 7.6 days and shoppers 2.9 days.

Again the highest expenditure per trip — about $560 — was made by students. Those travelling for recreation spent about $160 and those visiting friends and relatives spent about $79. Those whose purpose was shopping spent an average of about $72. Those who travelled for other purposes spent an average of about $83.

As to destinations, since the survey covered only travellers who had been away 48 hours or more, others were presumed to have travelled in border states. The state farthest from the border was selected as destination when the respondent reported more than one destination.

New York State was the destination of 26 per cent of the travellers, and Florida of an additional 13 per cent. The third most popular state was Washington which was the destination of 10 per cent of travellers. Michigan was fourth in order of importance, being the destination of 9 per cent of travellers. California, the destination of 7 per cent of travellers, was fifth in order of importance.

United States Travel in Canada

In 1960 there were 29.7 million American visitors to Canada who made expenditures amounting to $375 million. The overwhelming proportion — 78 per cent — entered Canada by car.

For purposes of analyzing United States motor traffic to Canada, states were grouped into regions: North Eastern, Great Lakes, North Western, West Coast, Other (remaining states and foreign countries). The analysis pertains to vehicles remaining in Canada over 24 hours.

The region from which the greatest number of visitors came — 44.3 per cent — was the North Eastern[1] region, the next largest proportion — 36.9 per cent — originating in the Great Lakes region.[2] Cars from the West Coast region[3] represented 8.7 per cent of the total. The proportion of entries from the North Western[4] region was 3.7 per cent and the remaining entries came from states not specified and foreign countries. Most of the cars — in fact, 79 per cent — entered Canada from the states forming the northern boundary with Canada.

About 70 per cent of the United States visitors to Canada stayed 24 hours or less and this group accounted for only 14 per cent of the expenditure.

It is worth noting that United States residents spend more on travel in Canada than in any other single country although Mexico followed close behind. The respective proportions in 1960 were 22 and 21 per cent.

Canadian Travel Overseas

Statistics of travellers returning from overseas segregate those returning direct from those returning via the United States. A mail questionnaire survey of selected groups of Canadian travellers returning direct from overseas countries provides information on type of transportation, destination, ports of exit and entry, purpose of travel, etc.

Dorval was the port of re-entry for 41 per cent of the travellers returning direct, with Malton and Quebec following well behind with 19 per cent and 18 per cent respectively. The typical traveller travelled by air; air lines received about 75 per cent of all overseas transportation costs.

The United Kingdom was the destination of some 30 per cent, while an additional 29 per cent visited Continental Europe as well as the United Kingdom; 19 per cent went to Europe only, 4 per cent to the West Indies Federation and the same proportion to Mexico and the remainder to other destinations.

The duration of the visit varied widely according to the country visited and the mode of transportation. The average visitor to the United Kingdom only stayed 50 days; plane travellers averaged 37, and boat travellers averaged 76 days.

Travellers who went to both the United Kingdom and Continental Europe averaged a 71 day stay, plane travellers averaging 50 days and boat travellers 106 days. Travellers returning direct from Continental Europe averaged a visit lasting 57 days — those travelling by plane 48 days, and those travelling by boat 91 days. Visits to West Indies Federation lasted on the average about 22 days, and to Mexico about 19 days.

Visiting friends or relatives was the most important purpose of travel; 49 per cent of returning travellers gave this as a reason for their journey. Next most important was recreation, which accounted for 39 per cent of the travellers. Approximately 9 per cent of travellers journeyed for business reasons and the remaining 3 per cent for reasons of health or education.

Since many non-European countries are more readily accessible through the United States, the pattern of destination of indirect re-entrants differs considerably from those of travellers who return directly to Canada. The United Kingdom accounted for only 4 to 5 of the indirect entries and Continental Europe for only 8 per cent; 8 per cent were returning from Bermuda; 9 per cent had been in the West Indies Federation; one-half of 1 per cent to Australia and New Zealand; 9 per cent had gone to British areas not already mentioned; 18 per cent travelled to Mexico; 10 per cent had gone to Central America and the non-British West Indies; 3 per cent had been in South America; about 15 per cent had been to destinations not already mentioned and 5 per cent had been to a combination of several areas.

---

[1] Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont.

[2] Illinois, Indiana, Michigan, Ohio, Wisconsin.

[3] California, Washington, Oregon.

[4] Minnesota, Montana, North Dakota.

The average length of stay abroad of Canadian residents returning via the United States in 1960 was 35.2 days of which 7.1 days were spent in the United States. Travellers returning from the United Kingdom spent an average of 30.9 days there and 2.4 days en route to the United States. For travellers making the combined trip to the United Kingdom and the Continent the average stay at destination was 62.1 days and 4.7 days en route from the United States. Travel time involved on trips to Continental Europe alone amounted to 58.2 days, of which 3.4 days were spent in the United States.

Travel to Bermuda on the average lasted 15 days, comprising 11.1 days in Bermuda and about 3.9 days in the United States. Canadians returning from the British West Indies spent an average of 8.5 days in the United States and 17.1 days at destination. Travellers to Mexico spent 18.2 days at destination and 12.1 days in the United States. The average trip to Central America and the non-British West Indies lasted 24.6 days. Trips to Australia and New Zealand lasted an average of 57 days, comprising 48.5 days at destination and 8.5 days en route.

The purpose of travel varied considerably as between the direct and indirect categories. The traveller returning via the United States was more often seeking recreation and less often visiting friends and relatives than his counterpart travelling directly. The first group comprised about two-thirds of all travellers and the second about 20 per cent. These figures compare with 39 per cent and 49 per cent for those who travelled direct. Those who travelled on business comprised about 9 per cent of all entrants whether direct or indirect. Health was a more frequent reason for travel among those who travelled via the United States.

Overseas Visitors to Canada

Overseas visitors entering Canada in 1960 numbered 71,900, of whom 24,000 arrived by way of the United States. Expenditures in 1960 by overseas visitors amounted to $45 million.

Turning to consider the patterns of movement, about two-thirds of the visitors arrived by plane. The United Kingdom provided 54 per cent of all visitors; other Commonwealth countries about 10 per cent; Continental Europe about 30 per cent; the balance came from other countries. About 75 per cent came as tourists or visitors and about 14 per cent for professional services or for religious reasons. The remainder consists of visitors in transit or on crews, students, members of the Armed Forces and diplomats, entertainers, and other not specified groups.

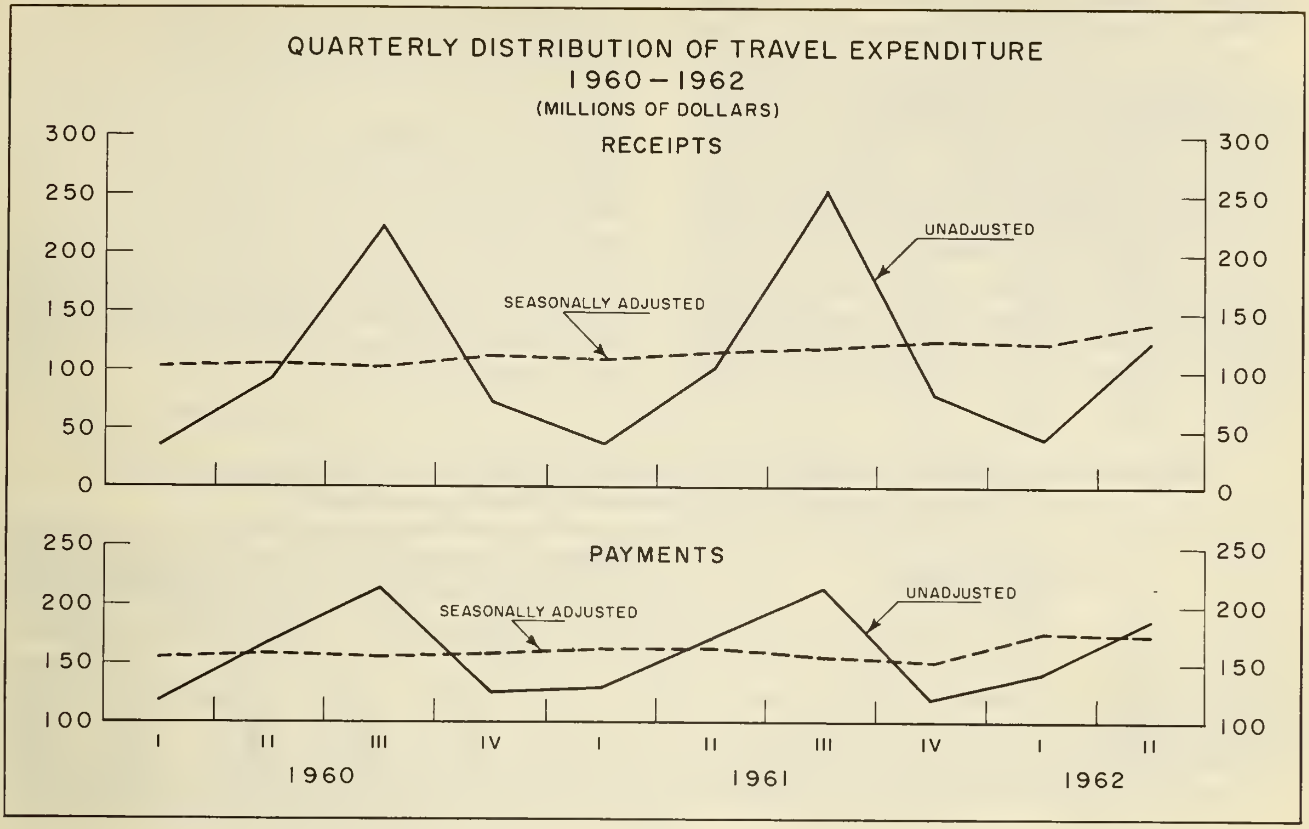
Recent Developments

The Canadian dollar was at a premium for a decade and at times at a substantial premium. It is to be expected that this situation would have some tendency to encourage Canadians to travel abroad and to discourage foreigners from travelling in Canada. In the second half of 1961 the Canadian dollar went to an appreciable discount and with the establishment of a fixed exchange rate of 92½ U.S. the discount is now substantial. In the second half of 1961 payments for travel declined and receipts increased, when seasonal factors are taken into account. However, payments rose sharply in the first quarter of 1962, largely as a result of the increase in travel overseas, and continued to be substantial in the second quarter. Meanwhile, receipts early in 1962 appear to have remained close to the level they reached in the second half of 1961, but from June on increases from last year have been more impressive.

The seasonally adjusted quarterly trends for 1960 - 1962 are shown in the accompanying chart, along with the actual expenditures. The chart shows the wide quarterly variations which occur in the balance of payments on travel account. These arise from the large concentration of more than half the year's receipts in the third quarter and the wider distribution of Canadian expenditures abroad throughout the year. In 1961 there was a favourable shift in the travel balance between the second and third quarters amounting to $109 million compared with a change of $69 million between the same periods of 1960.

As part of the programme announced on June 24th to protect the exchange rate of the Canadian dollar the amount of merchandise a traveller may bring in duty free three times a year was reduced from $100 to $25. In 1961, the amount of merchandise brought in under the exemption privilege was valued at $72 million, or more than 11 per cent of expenditure on foreign travel; in the three preceding years it also approximated $72 million per year. Even assuming the same volume of traffic, the potential saving in foreign exchange from the cutting back of the exemption privilege is substantial. Insofar as a significant proportion of travellers go abroad for the purpose of shopping, the volume of traffic may be restricted by the new regulations.

The geographical proximity of most of the Canadian population to the United States border and the close socio-economic ties between the two



countries, coupled with the rapidly growing taste for overseas travel have made foreign travel an important element in our current international transactions. Potential savings and potential earnings of foreign exchange in this area are obviously large. It remains to be seen how quickly the travel account will respond to the direct and indirect influences that are being brought to bear on it.

A NOTE ON FOREIGN CONTROLLED INVESTMENT IN CANADA

From time to time the Balance of Payments Section of the Bureau undertakes special studies of some aspect of foreign controlled investment[1] in Canada for publication in the report *The Canadian Balance of International Payments and Canada's International Investment Position.*[2] This year the size distribution of United States controlled manufacturing enterprises was the subject of a special study. Statistics were also compiled on the control by area of the largest enterprises, including those controlled in Canada, in the fields of petroleum and natural gas and mining as well as manufacturing. The largest enterprises selected were those having an investment of $25 million or over. It is believed that the results are of sufficient interest to warrant publication in advance of the release of the aforementioned report.

Throughout the industrial world there has been a marked tendency for the size of business enterprises to grow in recent decades. To an important degree the extension of non-resident enterprises in Canada has followed this world-wide pattern of larger scale operations as the following statistics illustrate.

---

[1] Foreign control is defined as a situation in which 50 per cent or more of the voting stock is held outside Canada or where smaller concentrated holdings may constitute effective control.

[2] Publication No. 67-201, Queen's Printer, Ottawa, $1.00. The issue for 1961, containing further details on this subject, is not likely to be issued before the end of this year.

The Size Distribution of Manufacturing Enterprises Controlled in the United States

The study, which covers the years 1946, 1953, and 1960, shows an increasing concentration of investment in the larger manufacturing enterprises controlled in the United States. This is shown in Table I. It should be noted, of course, that some of the shifts of enterprises into higher size groups in this and the other tables reflect the rising cost of new and replacement investment in the period.

In 1946, 83.4 per cent of all enterprises had investments of less than $1 million, but by 1960 the proportion had fallen to 68.6 per cent. Each of the larger size groups, $1 to $10 million, $10 to $25 million, and over $25 million investment, had grown in relative importance at the expense of the smallest enterprises. The more than $25 million group constituted 2.4 per cent of the total in 1960, compared with less than 1 per cent in 1946. Aggregate investment in the smallest group had fallen from 20.5 per cent of the total in 1946 to 5.6 per cent in 1960. The relative position of the $1 to $10 million group changed very little over the period. The proportion of investment of the $10 to $25 million group declined from 24.7 per cent in 1946 to 13.8 per cent in 1960. The proportion of aggregate investment by the largest enterprises — more than $25 million — had almost doubled, rising from 31.7 per cent in 1946 to 57.1 per cent in 1960.

TABLE 1. United States Controlled Manufacturing Enterprises[1] in Canada, Selected Year Ends 1946-1960, classification by Size of Investment

Aggregate investment in Canada	Number of enterprises			Aggregate investment in Canada		
	1946	1953	1960	1946	1953	1960
	number			millions of dollars		
More than $25 million	8	22	36	464	1,634	2,913
$10 to $25 million	22	29	45	362	401	705
$ 1 to $10 million	118	251	395	340	749	1,196
Less than $1 million	742	855	1,039	300	315	288

Note: Details will not add to totals because of rounding.

Foreign Control of the Largest Enterprises

Foreign control of the largest enterprises in the areas of activity covered has also increased in recent years. Table II shows the figures for the largest enterprises in absolute amounts and as a per cent of the total for manufacturing, petroleum and natural gas, and mining, considered as a group, for the years 1953 and 1960. In 1960 some 35.7 per cent by number of all the largest enterprises in these fields were controlled in Canada, compared with 46.5 per cent in 1953; the United States, the United Kingdom and other foreign countries all increased their share of control. In terms of the amount of investment Canadian control dropped from 37.4 per cent to 30.5 per cent of the total. The proportion of investment controlled in the United States fell from 58.4 per cent to 55.8 per cent, while the share of investment controlled in the United Kingdom rose from 4.2 per cent in 1953 to 10.4 per cent in 1960; none of the largest enterprises was controlled in other foreign countries in 1953, but by 1960 3.3 per cent of the total investment was so controlled.

In manufacturing industries (excluding petroleum refiners) the Canadian share of control of the largest firms increased a little between 1946 and 1953 and then declined sharply between 1953 and 1960. The data are shown for 1946, 1953, and 1960 in Table III. The figures on the number of enterprises and the amounts of investment involved show the same trend through time in the share of Canadian control. Thus, 42.8 per cent of investment in the largest enterprises was controlled in Canada in 1946, 45.6 per cent in 1953, and 39.3 per cent in 1960. The share of the United Kingdom declined sharply between 1946 and 1953 and rose even more sharply between 1953 and 1960. By 1960, other foreign countries controlled 2.9 per cent of investment in the largest enterprises, having controlled none in the two earlier years. The United States' share of control rose from 45.6 per cent of the total in 1946 to 47.4 per cent in 1953, and fell to 43.5 per cent in 1960.

TABLE II. Control of Manufacturing, Petroleum and Natural Gas, and Mining Enterprises[1] in Canada with an Aggregate Investment of $25 Million or More, End of 1953 and 1960

Controlled in	Number of enterprises		Aggregate investment in Canada

[1] Data exclude petroleum refiners.

Note: Details will not add to totals because of rounding.

Table IV shows the data on area of control for the largest enterprises in petroleum and natural gas for the years 1953 and 1960. During this period the Canadian share of control remained constant at 19.2 per cent of all investment while the overseas countries had acquired control of a significant proportion of investment in these industries by 1960, having had no control in 1953. The result is that the United States' share of control fell from 80.8 per cent to 69.8 per cent of the total, but part of these changes are due to an alteration in the statistical treatment of some international concerns. The development of natural gas distribution and marketing systems controlled in Canada has contributed to the stability of the Canadian share.

Between 1953 and 1960 the Canadian share of control in the largest enterprises in the mining industry fell significantly, as is shown in Table V. Overseas countries had acquired control of 8.7 per cent of investment in the industry by 1960, having had none in 1953. As a result of the extension of control by overseas countries, the share of the United States in the total dropped from 67.9 per cent to 63.8 per cent.

INDUSTRIAL PRODUCTION (More detail in Table 11)

Total industrial production rose fractionally in June due primarily to a 1.1% increase in manufacturing. This gain was widespread throughout both the durable and non-durable sectors. Production of iron and steel registered an increase of over 2% for the second consecutive month.

		total industrial production	manufacturing production			mining production	electricity and gas	total iron and steel

EMPLOYMENT, SELECTED INDUSTRIES (More detail in Table 17)

Employment in manufacturing increased fractionally in June reflecting similar movements in its two major components, non-durables and durables. Gains were also posted for employment in trade and mining. There were small declines in service and construction and a decline of 1.7% in transport.

	manufacturing							
	total	non-durable	durable	trade	service	transport	construction	mining

RETAIL TRADE, MOTOR VEHICLE SALES (More detail in Tables 47 and 75)

Total retail trade decreased by 2% in June but was still above the level at the first of the year. The decline was spread over most component series

Sales of new motor vehicles fell off sharply in June. Declines occurred in all three components with European passenger cars falling by 25%.

		retail trade total	retail trade (ex. motor vehicle dealers)	motor vehicle dealers	department stores	new motor vehicle sales

EXPORTS AND IMPORTS (More detail in Table 83)

Exports and imports for all countries declined in June by 9% and 7% respectively, from the irregularly high levels in May. The June figures however, were still higher than their first quarter averages. Labour disputes in the trucking industry seemingly affected the imports figures from the United States.

		exports (including re-exports)				imports

[1] Prior to the census in 1961, population estimates were made quarterly on March 1, June 1, September 1 and December 1, and in addition on July 1 and January 1 of each year. After the 1961 census the quarterly estimates will be made on January 1, April 1, July 1 and October 1, as well as June 1. [2] Figures for births, marriages and deaths for 1962 are provisional and represent registrations filed in provincial vital statistics offices during the month under review, regardless of the month of occurrence. These figures are exclusive of the Yukon and the Northwest Territories. Births and deaths are also exclusive of stillbirths. **Sources: Vital Statistics (84-001), D.B.S. and Department of Citizenship and Immigration.**

Table 6: national income and gross national product in current dollars

years and quarters	salaries wages and supplementary labour income	military pay and allowances	corporation profits before taxes and before dividends paid to non-residents	deduct: dividends paid to non-residents	rent, interest and miscellaneous investment income	accrued net income of farm operators from farm production[1]	net income of non-farm unincorporated business	inventory valuation adjustment	net national income at factor cost	indirect taxes less subsidies	capital consumption allowances and miscellaneous valuation adjustments	gross national product at market prices[2]

---

[1] Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stacks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. [2] Includes residual error of estimate. Source at bottom of Table 10.

[1] The statistics for individual industries exclude strikes involving less than 100 workers. The total for all industries continues to include all strikes. [2] The annual and monthly "all industries" totals for 1960 and 1961 have been revised and are no longer quite comparable with the data for individual industries, apart from the difference described in footnote 1. **Source: Labour Gazette, Department of Labour.**

---

[1] Seasonal (formerly supplementary) benefit data included. [2] On last working day of month; claimants formerly classified as "short time" and temporary lay-off are included. [3] Estimates are based on average weekly number of payments. [4] The number of calendar weeks during which a benefit payment was made. [5] Commencing March 1961, data relate to the last working day of the month. Previous to that date statistics are for the Thursday nearest the end of the month. [6] Excludes fishing claimants during the seasonal benefit period. **Source: Statistical Report on the Operation of the Unemployment Insurance Act, (73-001), D. B. S. and Labour Gazette, Table D-1.**

[1] The data in Tables 17 to 27 are based on reports from employers usually employing 15 persons and over and covering the respondents last pay period(s) in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and domestic service. [3] Includes storage and communication. [4] Includes insurance and real estate. [5] Excludes public administration and defence and such community services as health and education. **Source: Employment and Payrolls, (72-002), D.B.S.**

[1] See footnote 1, Table 17. [2] See footnote 2, Table 17. [3] Employment indexes in manufacturing and in its durable and non-durable components are given in Table 17. [4] In addition to those listed, tobacco products, leather, printing and publishing and miscellaneous industries are included in non-durable manufacturing.

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Industry values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total manufacturing inventory owned by manufacturers including warehouse stocks. [3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [4] End of period. [5] Classified according to the Standard Industrial Classification. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.**

[1] Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Excluding shipments for re-processing at maker's own plants. [3] Imports include, in addition to all other shapes, ingots, cast iron pipe, wire and wire ropes. Imports exclude castings (except cast iron pipe), forgings, fittinos and couplings. **Source: Primary Iron and Steel (41-001), D.B.S.**

[1] These totals include all generating agencies producing over ten million kilowatt hours per year. [2] These columns include all generating utilities and generating industries respectively, producing over ten million kilowatt hours per year. [3] Less imports. [4] Total net generation less net exports. [5] Mainly the amount used in electric boilers. **Source: Electric Power Statistics, (57-001), D.B.S.**

[1] Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area. [2] The data on building permits are collected for 1,100 municipalities and individual figures are available on request. Some of the annual totals for 1959 and 1960 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. **Source: Building Permits (64-001), D.B.S.**

[1] The coverage was extended to 507 municipalities in 1948, and as of 1961, stands at 1,100, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. **Source: Building Permits (64-001), D.B.S.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D.B.S.**

[1] Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected. [2] Planks and boards, flooring and square timber. [3] Hollow blocks including fireproofing and load-bearing tile. [4] For building insulation only. [5] Figures cover the production of firms which normally account for 90 per cent of the total for Canada. [6] Includes concrete chimney blocks, up to December 1959. [7] Factory sales of firms which normally account for 96% of total Canadian production. **Source: Concrete Products (44-002), Products made from Canadian clays (44-005), Asphalt Roofing (45-001), Rigid Insulating Board (36-002), Iron Castings and Cast Iron Pipes and Fittings (41-004), Steel Wire and Specified Wire Products (41-006), Gypsum Products (44-003), Mineral Wool (44-004), Sales of Paints, Varnishes and Lacquers (46-001) and Trade of Canada, Imports (65-007), Exports (65-004), D.B.S.**

*See also Tables 28 and 29. [1] Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1961 are final prices. From August 1, 1961 to date, the western grain prices used in the index are initial prices only for wheat, oats and barley. [2] Includes subsidy on hogs. [3] Based on price for hogs including Dominion premium up to September 1960. A rise in ratio favours production of beef. [4] Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights. **Source: Coarse Grains Quarterly (22-001), Stocks of Meat and Lard (32-012), Index Numbers of Farm Prices of Agricultural Products (62-004), Livestock and Meat Trade Report, Dept. of Agriculture, D.B.S.**

[1] Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Revised to include bagged seed wheat previously excluded. [2] Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. [3] Annual data are monthly averages of crop year. [4] Includes eggs for hatching.

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted. [2] Includes stocks held by manufacturers, wholesalers and other warehouses. [3] The increase in percentage of capacity from October to November, 1960 reflects the fact that some mills worked more than the 25 days included in this formula as well as a reduction in total daily capacity from 171,000 hundredweight in October to 151,000 hundredweight in November. **Source: Grain Milling Statistics (32-003), Margarine Statistics (32-005), Quarterly Report on Processed Foods (32-007), D.B.S.**

---

[1] Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. [2] Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade. **Source: Retail Trade (63-005), D.B.S.**

[1] Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available.

[2] Conditional sale agreements held in connection with the financing of retail purchases of consumer goods.

[3] Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments.

[4] Excluded from the above tabulation are charge accounts of motor vehicle dealers whose credit is extended mainly to businesses rather than to consumers. Instalment credit includes conditional sales agreements only.

[5] Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds.

[6] Figures for dates other than year ends are estimated on the basis of the loans by twelve companies.

[1] As from January 1958 the indexes, the imports total and the "miscellaneous commodities" total exclude various non-commercial and special transactions previously included in our imports totals. For a more detailed explanation see Trade of Canada (Exports) 1960. [2] Includes pigs, ingots, blooms and billets, castings and forgings, ferro-alloys and rolling mill products. **Source: Trade of Canada, Imports (65-007), D.B.S.**

[1] Data in this table refer to railways with annual operating revenues of $500,000 or over. Monthly averages for 1960 and 1961 differ from the sum of the monthly data due to revisions which cannot be allocated by months. [2] As of January, 1958, statistics include the British Columbia Electric Railway. [3] As of January, 1958, the Hudson Bay Railway has been absorbed into the Canadian National Railway system. [4] Includes January to July interim payments related to recommendations of the Royal Commission on Railway Transportation. **Source: Railway Operating Statistics (52-206), D.B.S.**

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month.
[2] Mainly deposits of foreign banks.
[3] Capital, rest fund and undivided profits as at the latest fiscal year-end.
[4] Including issues payable in foreign currency.
[5] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans.
[6] Excluding Canadian day to day loans.
[7] Loans to grain dealers and exporters.
[8] Loans to finance purchase of Canada Savings bonds at time of issue.
[9] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities.
[10] Including loans to instalment finance companies.

[1] Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks. [2] Subsidiory coin issued by the Mint less coin held by Bank of Canada and chartered banks in Canada. [3] Less total float, i.e. cheques and other items in transit (net). [4] At September 30, 1957, the deposit balances of religious, educational and welfare institutions used for business purposes, about $140 million, were reclassified from "personal savings deposits" to "other notice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date. **Source: Statistical Summary of Bank of Canada.**

Note: This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales. [1]The Canada totals by months for 1960 and 1961 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1960 and 1961 nor the monthly averages for 1961 have been revised to agree with the Canada total. **Source: Monthly Survey of Life Insurance Sales in Canada, Life Insurance Agency Management Association, Hartford, Conn.**

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (excluding government-owned companies and incorporated co-operatives). [1]Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction. [2]Includes, in addition to the industries listed, Tobacco and Leather. **Source: Corporation Profits (61-003), D.B.S.**

A NOTE TO USERS

Changes in this Issue:

(1) In Table 16, the title now reads: "Activities of Unemployment Insurance Commission". Some other small changes have been made in the headings and footnotes to clarify their meanings.

(2) The original and the seasonally adjusted figures for all the series of employment, page S-3 and Table 17, page 15, have been revised back to January, 1960.

(3) The seasonally adjusted data for shipments, inventory and new orders in manufacturing, classified by economic use groups, of Tables 33, 34 and 35 respectively, have been revised back to January, 1959. The series presented in Table 36 and page S-6 are revised to September 1959, but, the series for "shipments of primary iron and steel" is revised to January, 1961 only. The revised data for page S-6 can be entered into the Annual Supplement to provide a continuous back record.

(4) Table 99, presents revised security price indexes for common and preferred stocks, on the new base 1956 = 100, classified according to the Standard Industrial Classification. Complete information about these revisions is supplied in the latest issue of "Prices and Price Indexes" (62-002). Compared with the previous table, the series for "machinery and equipment" has been deleted and the series for "industrial mines", "primary metals" and "petroleum" have been added. Under "finance", a total series for 14 stocks is added and the former index for six bank stocks is retained.

Back Records:

The following back records, raw and seasonally adjusted are available on request from the Current Business Indicators Section, National Accounts and Balance of Payments Division. These are in addition to the back records found in the Annual Supplement.

(1) The series on inventories, shipments and new orders in Tables 33, 34 and 35, from 1952 to date.

(2) All the series of corporation profits before taxes, Table 98, are available quarterly, from 1955 to date.

Annual Subscription: $5.00 — Single copies: 50c. each

INTRODUCTORY REVIEW

There was a further expansion in economic activity in the second quarter. Gross National Product was at a seasonally adjusted annual rate of $39,424 million, 1½ per cent higher than in the first quarter. Higher prices account for one-third of the increase, thus reducing the increase in real Gross National Product to about 1 per cent. The rate of increase in prices was of the same magnitude as that of the immediately preceding quarter.

This expansion was based on final demand; since, as in the first quarter, investment in business inventories was virtually negligible; farm inventories continued to be drawn down. The major expansionary influences came from exports, and from government expenditure on goods and services which was higher at all levels of government. There was only a modest increase in consumer expenditure, with services absorbing most of the gain. Business gross fixed capital formation was up fractionally, construction activity showing no change and expenditure on machinery and equipment rising slightly. Imports were higher but to a much lesser extent than exports. The devaluation of the Canadian dollar has, of course, affected both import prices and export prices, making for a significant rise in prices in the external sector.

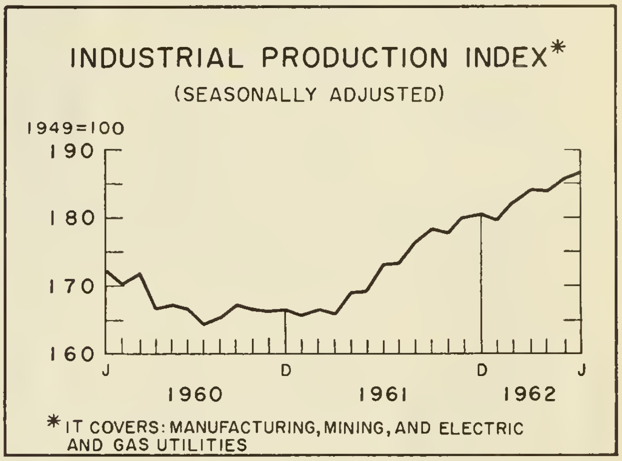
On the income side, the salient developments are the further expansion in labour income, but at a lower rate than in the preceding quarter, and a small advance in corporate profits (before dividends paid abroad), after a similar decline in the first quarter. Accrued net farm income increased substantially.

There was an unusually large divergence between national and personal income, mainly because of the exceptionally large payments made to farmers by the Canadian Wheat Board. This sharp increase in personal income, in conjunction with a very modest rise in consumer spending, made for a much higher rate of personal saving. There was a slight widening of the overall deficit on government transactions, as expenditures rose more than revenues.

Production

Seasonally adjusted, production for the second quarter of 1962 shows a volume increase of about 1 per cent over the previous quarter. Just under three-quarters of this increase was due to a 1½ per cent gain in the goods-producing industries. The service-producing industries showed a volume increase of one-half of 1 per cent.

The only components of the goods-producing industries to show a percentage decline from the first to the second quarter were forestry, with a 5 per cent decline (most of which is accounted for by a drop in pulpwood production), and fishing and trapping. Other components and their increases include mining (1 per cent), manufacturing (2 per cent), and electric power and gas utilities (0.5 per cent).



INDUSTRIAL PRODUCTION INDEX*

(SEASONALLY ADJUSTED)

* IT COVERS: MANUFACTURING, MINING, AND ELECTRIC AND GAS UTILITIES

Within mining, metal mining went up by about 3 per cent, with gains in iron ore and zinc accounting for most of the strength. Partially offsetting the above gains were declines in nickel and other metals (including uranium). Fuel mining and non-metal mining both declined by about 1 per cent.

Non-durable manufacturing, which increased by 1 per cent, contributed about 30 per cent to the total increase in manufacturing, while durables, with a 3 per cent gain, accounted for the remaining 70 per cent. The durables group resumed its advance after a slight decline in the first quarter.

Within non-durables, the industries showing the largest gains include clothing and textiles (each of which was up 3 per cent), foods and beverages, rubber products, printing and publishing, and chemicals.

Within durables, iron and steel products continued to advance, increasing by 5 per cent, with iron castings and primary iron and steel accounting for the bulk of this increase. In aggregate, iron and steel products contributed just under half of the total increase in durables. Transportation equipment was up by 7 per cent, with most of the gain in the motor vehicle industries. The transportation equipment industry accounted for roughly one-third of the rise in durables manufacturing. The remainder of the increase was due to a 7 per cent gain in non-metallic mineral products (mostly as a result of an increase in concrete products), and a gain in the electrical apparatus and supplies industry. The only major groups within durable manufacturing which showed a

(SEASONALLY ADJUSTED AT ANNUAL RATES)

decline in the second quarter were non-ferrous metal products, down by 2 per cent, and wood products, which showed a fractional decline.

The relatively small increase of 0.5 per cent in the output of service-producing industries was the result of fairly large but mainly offsetting movements. Trade was up by 1½ per cent, finance, insurance and real estate by 1½ per cent and public administration and defence, as well as other services, increased by 0.5 per cent.

The transportation, communication and storage industry group declined by 2 per cent. Within transportation, strikes and union jurisdictional disputes were the cause of the most significant declines, and especially affected the shipping and trucking industries. This labour unrest also had repercussions in the railway industry. A 7 per cent decline in the output of the air transport industry was also a major contributing factor to the decline of this industry group. There was a considerable decline in the storage industries (21 per cent), due largely to the depletion through sales in recent months of grain stored in grain elevators. The communication industries showed a small upward movement in the quarter.

Within trade, the most significant increase was shown by wholesale trade (3 per cent), with wholesalers proper contributing approximately two-thirds to this increase. Retail trade increased by 1 per cent. Within retail trade the more significant volume gains include the following: department stores, family clothing stores, women's clothing stores, jewellery stores and lumber and building material dealers. Among the more significant declines were garage and filling stations, fuel dealers, and independent grocery and combination stores.

Accompanying this increase in production, was a commensurate rise in employment. The labour force increased by 1.1 per cent, the proportion of the labour force which was unemployed falling from 6.0 to 5.8 per cent between the first and second quarters, after seasonal factors are taken into account.

Price Movements

Between the first and second quarters of 1962, the price component of Gross National Expenditure was estimated to have increased by about ½ of 1 per cent. The price increases in the current quarter have been evident in all the expenditure categories. For example, prices associated with personal expenditure, and gross fixed capital formation, as well as with exports and imports showed increases during the second quarter. The following table shows quarter-to-quarter changes in the seasonally adjusted price indexes from the third quarter of 1961 through to the second quarter of 1962.

Quarter-to-Quarter Percentage Changes

Gross National Expenditure	—	0.3	0.4	0.4

[1] In this table percentage changes are based on the implicit price index for personal expenditure on services, before adjustment for the components of net expenditure abroad.

[2] Little significance should be attached to small changes in quarter-to-quarter price change for this component.

Personal Expenditure on Consumer Goods and Services

Personal expenditure, at a seasonally adjusted annual rate of $25.5 billion, increased one-half of 1 per cent from the first quarter. This increase is almost entirely accounted for by the rise in prices in the consumer sector.

The one-half of 1 per cent rise in prices of consumer goods and services was the largest in recent quarters. On a seasonally adjusted basis, prices of goods and services showed the same degree of increase. The major part of the rise in prices was in foods (mainly meats), new cars and purchased transportation; prices of electricity declined; other prices were stable or showed only the average increase.

Expenditures on services showed the only significant rise; the 1½ per cent rise reflecting increases in shelter (3 per cent), transportation services (2½ per cent), and personal services (1½ per cent). Net expenditure abroad decreased sharply, reflecting increased spending by foreign tourists in Canada.

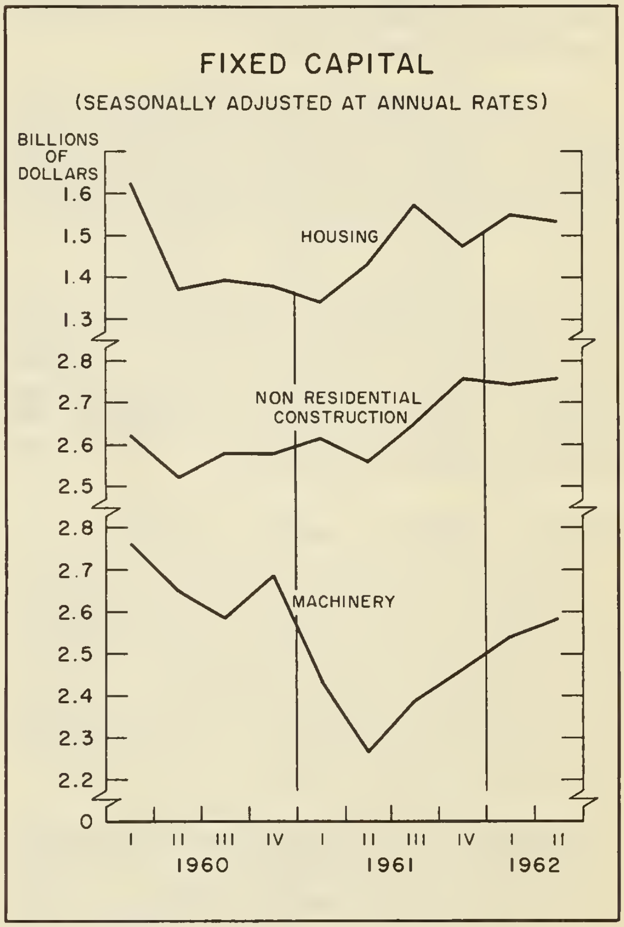
Spending on consumer goods was unchanged, with a 1 per cent increase in durables offsetting a fractional decline in non-durables. Within durable goods net purchases of new and used cars increased about 1 per cent. Home furnishings and appliances and radios increased by 2 per cent, while purchases of furniture showed a 1 per cent decline.

The slight decline in non-durables reflects largely offsetting movements within its components. Decreases were registered by fuel (-6 per cent); electricity (-1 per cent, reflecting rate adjustments in British Columbia); clothing (-1 per cent); and food (-½ per cent); while increases were shown by tobacco and alcoholic beverages (1½ per cent); and household supplies (1 per cent).

The small rise in personal spending did not match the 4 per cent rise in personal disposable income, resulting in an unusually sharp increase in personal saving. The large increase in personal income mainly reflected payments made to western farmers by the Canadian Wheat Board.

Business Gross Fixed Capital Formation

No marked change in overall fixed capital formation occurred—at an annual rate of $6,880 million after allowance for seasonal variation, the level showed a fractional increase from the previous quarter. Within the total, construction activity showed no change in the second quarter, while outlays on machinery and equipment rose. This rate of investment left the proportion of current production devoted to fixed capital at one of the lowest levels in the past decade. The rate of investment in the first half of the year coincided closely with the rate anticipated for the full year as recorded in the mid-year survey of investment intentions for 1962.



Outlays on housing declined by almost 1 per cent from the previous quarter— to an annual rate of $1,536 million. This decline in value was in line with the reduction in the number of dwelling units upon which construction was started in the second quarter. Although down from the first quarter, the seasonally adjusted annual rate of 133 thousand starts achieved in the second quarter was still high in relation to the average over the past two and a half years. Housing starts in municipalities of population of over 5,000 in July indicate little change from the second quarter level for these centres. Completions in the quarter were running at a seasonally adjusted rate of 115,000 units.

Non-residential building and engineering outlays were at an annual rate of $2,760 million, discounting seasonal factors, or one-half of 1 per cent above the first quarter level. Although employment in the industry fell in the second quarter, higher hourly earnings raised the level of labour income in the industry.

Spending on machinery and equipment continued to increase for the fourth successive quarter, bringing the seasonally adjusted annual rate to $2,584 million, 1½ per cent above the first quarter and 14 per cent above the previous low one year earlier. Much of the strength in machinery and equipment sprang from substantially increased purchases of commercial trucks and vehicles.

Business spending on plant and equipment combined, at an annual rate of $5,344 million, was a return to approximately the level existing prior to the 1960 downturn in business activity; the current level of investment has in fact been exceeded on only two occasions since the beginning of 1958.

As in the previous quarter, there was a rise in prices of investment goods of approximately 1 per cent. Although prices in residential construction and non-residential construction rose, the upward pressure was more apparent in the machinery and equipment component, reflecting the increased cost of imported machinery and equipment following the devaluation of the Canadian dollar.

Investment in Non-Farm Business Inventories

As in the first quarter, virtually no support to the level of economic activity came from investment in inventories. There was only a small accumulation, which took place in retail trade and in "other" industries. Manufacturing and wholesale trade drew down their stocks. The changes in non-farm business inventories from the first to the second quarter are shown in the following table.

Changes in Non-Farm Business Inventories, by Quarters

Seasonally adjusted at annual rates

Industry	1Q'62	2Q'62
	millions of dollars	
Manufacturing	88	- 104
Durables	- 60	- 16
Non-durables	148	- 88
Wholesale	- 48	- 160
Retail	- 76	196
Other	60	108
Totals	**24**	**40**

Inventory liquidation in manufacturing industries, far from being widespread, was most pronounced among non-durable industries, especially food and chemicals; among durables, the transportation equipment and non-metallic mineral products industries showed the greatest depletion of stocks. Classified by level of processing, stocks showed conflicting tendencies; stocks of raw materials and goods in process were accumulated, while inventories of finished goods were run down, as shipments rose by over 2 per cent. These movements reduced the ratio of total stocks to shipments below the level of the preceding quarter, but not below the average for the past six years. Available data showing total book value of stocks held by manufacturers suggest that part of strength in inventory accumulation normally associated with periods of economic recovery was lacking in recent quarters, since only marginal reductions in stock took place in the preceding downturn in activity.

Wholesalers continued to draw down their inventories, at a greater rate than that of the previous quarter. The ratio of stocks to sales was lower than in the previous quarter, and below the average since 1958. Here, as in manufacturing industries, non-durable industries reduced their stocks at a faster rate than durable industries. Depletion was quite widespread in non-durables, though in varying rates. With the notable exception of stocks of hardware which were accumulated, the rest of the durable goods wholesalers reduced their stocks, the reduction being most pronounced in industrial machinery and commercial equipment.

Inventories were increased in retail trade, reversing the trend of the previous quarter. As a consequence, the stock to sales ratio was the highest of the last decade. Accumulation was slightly higher in durables than non-durables. Increase in stocks of motor vehicle dealers, and of farm implement dealers among durables, and of food dealers among non-durables, was responsible for most of the total stock accumulation in retail trade.

Exports and Imports of Goods and Services

One of the main sources of strength in the current quarter was the level of foreign demand for Canadian goods and services, exports rising by 5 per cent to a seasonally adjusted annual rate of $8,240 million. The rise in total imports was less and at an annual level of $9,216 million was a little under 3 per cent higher than the previous quarter. These movements in foreign trade combined to reduce the deficit on current account from $1,128 million to $976 million, seasonally adjusted at annual rates.

The positive balance on merchandise trade was larger than in the first quarter. Exports of merchandise at an annual rate of $6,400 million were up 5 per cent in total and sales to the United States, United Kingdom and all other countries combined registered increases, as wheat, aluminum, copper, petroleum, iron ore, lumber and wood pulp all showed increases in level. Increased Canadian demand for imported goods raised the total by 1½ per cent, to $6,136 million, seasonally adjusted at annual rates but commodity composition of this demand is not yet available.

Exports and Imports of Merchandise and Services

Seasonally adjusted at annual rates

	3Q'61	4Q'61	1Q'62	2Q'62
	millions of dollars			
Exports:				
Merchandise	6,156	6,256	6,112	6,400
Services	1,700	1,700	1,724	1,840
Totals	**7,856**	**7,956**	**7,836**	**8,240**
Imports:				
Merchandise	5,856	6,072	6,048	6,136
Services	2,752	2,740	2,916	3,080
Totals	**8,608**	**8,812**	**8,964**	**9,216**

The deficit on the services account, after seasonal factors are discounted, increased to $1,240 million at annual rates, from $1,192 million in the first quarter. The main factors in this increase were the sharp 13 per cent increase in the outflow of interest and dividend payments, which boosted this figure to the second highest recorded and the rise in payments for miscellaneous services which rose by almost 6 per cent. The level of total payments stood at $3,080 million in the second quarter. Some offset to these increases occurred in the higher level of receipts, particularly in respect of travel expenditures of foreigners in Canada, which rose by 15 per cent. Increases in receipts of interest and dividends and in receipts for the supply of freight and shipping services, combined to raise the total annual rate of receipts, seasonally adjusted, to $1,840 million.

Between the first and second quarters of 1962 the price component of both exports and imports of goods and services showed a significant increase, largely the result of a decline in the exchange value of the Canadian dollar, which automatically raises the price of imports and of those exports priced in foreign currency. Comparing the unadjusted data for the second quarter of 1961 with the second quarter of 1962, it is estimated that about one-third of the 12 per cent increase in the value of merchandise exports and about one-half of the 13 per cent increase in the value of merchandise imports have resulted from price changes.

Labour Income

The seasonally adjusted labour income estimate for the second quarter of 1962 was 1.6 per cent higher than the corresponding figure for the first quarter of the year. This rise was slightly smaller than that occurring between the fourth quarter of 1961 and the first quarter of 1962, which amounted to 1.9 per cent. Both these quarterly increases were larger than the average for the past decade, as were preceding quarterly gains back to the beginning of 1961. It appears that increases in the volume and in the price of labour inputs both contributed to the first-to-second quarter rise in labour income.

Excluding supplementary income, for which quarterly data are not available on an industrial basis, the wages and salaries for the second quarter were also 1.6 per cent higher than the corresponding first quarter figure. The gain for the goods-producing industries amounted to 2.0 per cent, and the rise for the service-producing industries was 1.2 per cent. In both segments, the increases were slightly smaller than those occurring in the previous quarter. The seasonally adjusted total for goods-producing industries continued to rise more rapidly than the corresponding figure for service-producing industries, as has been usual at similar stages of business cycle upswings.

Seasonally Adjusted Estimates of Wages and Salaries, 1960-1962
Quarter-to-Quarter Percentage Changes

	3Q'60 to 4Q'60	4Q'60 to 1Q'61	1Q'61 to 2Q'61	2Q'61 to 3Q'61	3Q'61 to 4Q'61	4Q'61 to 1Q'62	1Q'62 to 2Q'62	Percentage of wages and salaries 1961
All industries	0.5	0.8	1.8	1.7	1.4	1.9	1.6	100.0
Goods-producing industries	- 0.7	- 0.1	1.5	1.7	1.9	2.4	2.0	42.2
Manufacturing	- 0.1	0.5	1.9	2.4	1.9	1.3	2.5	29.6
Construction	- 2.2	- 1.2	0.6	0.6	0.9	5.9	2.4	6.8
Primary industries	- 2.2	- 1.5	0.5	- 0.6	2.6	3.7	- 1.0	5.8
Service-producing industries	1.5	1.4	2.0	1.7	1.1	1.6	1.2	57.8
Finance, service and public administration	2.4	2.0	2.4	2.2	1.8	1.8	1.4	30.3
Trade	0.8	0.7	1.1	1.4	0.6	1.5	2.1	15.2
Transportation, communication and other utilities	—	0.8	2.2	1.1	—	1.2	- 0.1	12.3

The quarter-to-quarter gain in manufacturing was 2.5 per cent, the second largest recorded since 1956. Nevertheless, the 2.0 per cent rise for the goods-producing industries fell short of the 2.4 per cent gain occurring between the fourth quarter of 1961 and the first quarter of 1962 owing to developments in construction and the primary industries. Marked wage and salary increases had occurred in both these areas in the previous quarter. The second quarter estimates indicated a reduced rate of gain in construction, and a decline in total wages and salaries originating in primary industries.

The first to second quarter increase in the service-producing industries was 1.2 per cent. In the previous quarter, the gain had been 1.6 per cent, a figure equal to the average for the last ten years. A reduced rate of gain for the large finance, service and public administration grouping was partly responsible for the change. The 1.4 per cent rise for this grouping was small in comparison with those recorded from quarter to quarter in 1960 and 1961, and one of the smallest for recent years. However, the first-to-second quarter gain in trade was 2.1 per cent, one of the largest quarterly increases for this industry since 1957. Wages and salaries in transportation, communication and other utilities (which have tended to move erratically from quarter to quarter) did not increase from the first to second quarter of 1962, partly because of industrial disputes in trucking.

Accrued Net Income of Farm Operators

Accrued net income of farm operators from farm production rose by 8 per cent, seasonally adjusted, from the first to the second quarter of 1962, reflecting primarily the accumulation of inventories of livestock and grains and the higher trading profits of the Canadian Wheat Board. Cash receipts of farm operators from the sale of grains declined, reflecting the low crop production of last year, but in the current quarter this was partially offset by increased tobacco sales with the result that total cash income declined fractionally.

Seasonally adjusted, net income received by farm operators in the second quarter rose to its highest level since the third quarter of 1953. The net income estimate differs from the accrued net income series in that the former reflects the cash payments to the farmer from the Canadian Wheat Board, whereas the latter series includes the full amount accruing from the Board's operations. Thus, the increase in net income can be attributed to the exceptionally large payments made by the Canadian Wheat Board. The closing out of the 1960-1961 wheat pool account resulted in the largest average final payment in the history of the Board's operations. Adjustment payments to take account of the increase in the initial prices of wheat effective on all deliveries in the 1961-1962 crop year were also made during the quarter.

Net Income of Unincorporated Business

Net income of non-farm unincorporated business, seasonally adjusted, declined fractionally in the second quarter from the first quarter rate. Net income in retail trade dropped slightly, but was offset by a small rise in the service industries.

Corporation Profits

Corporation profits (before taxes and before dividends paid to non-residents) rose by about 3 per cent in the second quarter of 1962 to a seasonally adjusted annual rate of $3.9 billion. Profits were at record levels, over 30 per cent above the cyclical trough in the first quarter of 1961. The chief industries contributing to the increase were mining, quarrying and oil wells, manufacturing, and the finance, insurance and real estate groups. Higher profits were an experience common to all other industrial groups except wholesale and retail trades and public utility operations.

Within manufacturing, however, there were offsetting movements with increases in printing and publishing, metals and machinery and transportation equipment, electrical apparatus and supplies and non-metallic mineral products and declines in foods and beverages, paper products, and petroleum and coal products.

Dividends paid to non-residents increased substantially, so that corporation profits before taxes and after dividends paid to non-residents remained virtually unchanged from the first to the second quarter of 1962.

Rent, Interest, and Miscellaneous Investment Income

Rent, interest and miscellaneous investment income rose by close to 4 per cent after adjustment for seasonal factors, attributable to a rise in the trading profits of government enterprises, net rents received by individuals and in receipts from withholding taxes on interest and dividends paid abroad.

Following a decline from the fourth quarter 1961 to the first quarter 1962, the interest, dividends and net rental income component of personal income increased by 4 per cent mainly because of a rise in bond interest, net rental income and dividends received by persons.

The Government Sector

Expenditure on goods and services of all levels of government increased by 4 per cent, with the greater part of the increase occurring at the provincial-municipal level attributable primarily to increased outlays on construction of vocational schools and for higher payments for labour. As mentioned earlier, the increase in government expenditure on goods and services was one of the major forces in the expansion of demand from the first to the second quarter.

Seasonally adjusted, total expenditures by all levels of governments combined increased by about 1½ per cent from the first to the second quarter of 1962, resulting from a 6 per cent increase in total expenditures of the provincial-municipal governments being offset in part by a decline of 2 per cent at the federal level. Combined revenues of all governments, however, rose by only 1 per cent, so that the combined deficit advanced from $976 million to $1,048 million, seasonally adjusted at annual rates.

This increase in the total combined deficit conceals offsetting movements at the Federal and the provincial-municipal levels, which are related to an irregularly high Federal deficit and an irregularly low provincial-municipal deficit in the first quarter. These irregularities reflect the transition from the previous tax-sharing arrangements to the new procedure for apportioning taxes between the Federal and provincial governments. Thus the second quarter Federal deficit declined $300 million and this amount was reflected in the increase of $380 million which took place at the provincial level. With the effect of the first quarter irregularity removed, the Federal deficit in the second quarter remained almost unchanged, but there was an increase of $80 million at the provincial-municipal level, seasonally adjusted, between the first and second quarters.

The drop in federal expenditures can be largely attributed to declines in transfer payments to persons and in transfers to the provincial governments. The decline in federal transfer payments to persons reflected lower payments of unemployment insurance benefits, and the absence of the irregular payments which were made in the first quarter under the Prairie Farm Assistance Act and to western grain producers. These declines more than offset the rise in expenditure on goods and services and larger payments from the Old Age Security Fund, the latter reflecting the monthly increase of $10 in old age security payments effective February 1, 1962. All components of total federal revenue showed gains with the exception of direct personal taxes, which declined slightly.

At the provincial-municipal level, transfer payments to persons increased owing to larger payments to hospitals and educational institutions as well as for social assistance. Total revenues showed little change.

INDUSTRIAL PRODUCTION (More detail in Table 11)

Total industrial production continued to advance in July, mostly on the strength of a small rise in durables and electricity and gas. Non-durables and mining declined slightly.

		total industrial production	manufacturing production			mining production	electricity and gas	total iron and steel
			total	durables	non-durables

RETAIL TRADE, MOTOR VEHICLE SALES (More detail in Tables 47 and 75)

Total retail trade increased by 3.2% in July reflecting increases in most components. The largest contributors were grocery and combination, other food and beverage and miscellaneous stores.

Total sales of motor vehicles rose by 3% in July reflecting increases in American passenger and in commercial vehicles sales. European passenger vehicles declined notably for the second consecutive month.

		retail trade total	retail trade (ex. motor vehicle dealers)	motor vehicle dealers	department stores	new motor vehicle sales

CONSTRUCTION (More detail in Tables 63, 64 and 59)

The total value of building permits increased slightly in July on the strength of rises in industrial and institutional and government components of non residential building permits. Residential building permits declined by 5.6%.

Completion of new dwellings decreased sharply in August. Total starts moved down by 2.8%.

		value of building permits			new dwelling construction, centres 5,000 and over

MANUFACTURING INVENTORIES, SHIPMENTS, ORDERS (More detail in Tables 35 and 36)

Inventories, shipments and new orders rose in July whereas unfilled orders remained unchanged. Shipments of primary iron and steel continued to advance following the trend of the first part of 1962.

		all industries				new orders machinery	new orders construction goods	shipments primary iron and steel	ratio of inventories to shipments

---

[1] Includes hours paid in regular and overtime periods and hours of paid absence in the pay periods reported. [2] Original data as in column 5, Table 79. [3] Not adjusted for seasonal variation.

SELECTED QUARTERLY SERIES (More detail in Tables 6, 10, 60, 61, 66, 79 and 101)

Gross national product continued to advance in the second quarter. Personal disposable income and corporation profits before taxes also advanced. Farm cash income grew by 20% to reach a record level for the last ten years. Wheat Board payments to the farmers are largely responsible for this sharp increase.

		gross national product at market prices		personal disposable income	corporation profits before taxes[2]	farm cash income	consumer credit outstanding total[3]	dwelling units all centres		commercial failures

---

[1] Includes change in farm inventaries. The seasonally adjusted data include an arbitrary smoothing of crap production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. [2] Includes residual error of estimate. Source at bottom of Table 10.

[1] The statistics for individual industries exclude strikes involving less than 100 workers. The total for all industries continues to include all strikes. [2] The annual and monthly "all industries" totals for 1960 and 1961 have been revised and are no longer quite comparable with the data for individual industries, apart from the difference described in footnote 1. **Source: Labour Gazette, Department of Labour.**

[1] The data in Tables 17 to 27 are based on reports from employers usually employing 15 persons and over and covering the respondents last pay period(s) in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and domestic service. [3] Includes storage and communication. [4] Includes insurance and real estate. [5] Excludes public administration and defence and such community services as health and education. **Source: Employment and Payrolls, (72-002), D.B.S.**

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Industry values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total manufacturing inventory owned by manufacturers including warehouse stocks. [3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [4] End of period. [5] Classified according to the Standard Industrial Classification. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.**

[1] Releases of domestically manufactured tobacco for consumption in Canada. [2] End of period. [3] The production of beer is shown in thousand barrels of 25 gallons each. [4] Includes bottling of imported liquors. **Sources: Quarterly Stocks and Consumption of Unmanufactured Tobacco, (32-014), D.B.S., Department of National Revenue.**

[1] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [2] Rough cords of 128 cu. ft. [3] Customs exports. [4] Mill shipments destined for export. **Sources: Pulpwood Production (25-001), Trade of Canada, Exports (65-004), D.B.S. Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.**

[1] Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Excluding shipments for re-processing at maker's own plants. [3] Imports include, in addition to all other shapes, ingots, cast iron pipe, wire and wire ropes. Imports exclude castings (except cast iron pipe), forgings, fittings and couplings. **Source: Primary Iron and Steel (41-001), D.B.S.**

[1] These totals include all generating agencies producing over ten million kilowatt hours per year. [2] These columns include all generating utilities and generating industries respectively, producing over ten million kilowatt hours per year. [3] Less imports. [4] Total net generation less net exports. [5] Mainly the amount used in electric boilers. **Source: Electric Power Statistics, (57-001), D.B.S.**

[1] Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area. [2] The data on building permits are collected for 1,100 municipalities and individual figures are available on request. Some of the annual totals for 1959 and 1960 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. **Source: Building Permits (64-001), D.B.S.**

[1] The coverage was extended to 507 municipalities in 1948, and as of 1961, stands at 1,100, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. **Source: Building Permits (64-001), D.B.S.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D.B.S.**

---

[1] Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected. [2] Planks and boards, flooring and square timber. [3] Hollow blocks including fireproofing and load-bearing tile. [4] For building insulation only. [5] Figures cover the production of firms which normally account for 90 per cent of the total for Canada. [6] Includes concrete chimney blocks, up to December 1959. [7] Factory sales of firms which normally account for 96% of total Canadian production. **Source: Concrete Products (44-002), Products made from Canadian clays (44-005), Asphalt Roofing (45-001), Rigid Insulating Board (36-002), Iron Castings and Cast Iron Pipes and Fittings (41-004), Steel Wire and Specified Wire Products (41-006), Gypsum Products (44-003), Mineral Wool (44-004), Sales of Paints, Varnishes and Lacquers (46-001) and Trade of Canada, Imports (65-007), Exports (65-004), D.B.S.**

*See also Tables 29 and 30. [1]Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1961 are final prices. From August 1, 1961 to date, the western grain prices used in the index are initial prices only for wheat, oats and barley. [2]Includes subsidy on hogs. [3]Based on price for hogs including Dominion premium up to September 1960. A rise in ratio favours production of beef. [4]Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights. **Source: Coarse Grains Quarterly (22-001), Stocks of Meat and Lard (32-012), Index Numbers of Farm Prices of Agricultural Products (62-004), Livestock and Meat Trade Report, Dept. of Agriculture, D.B.S.**

[1] Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Revised to include bagged seed wheat previously excluded. [2] Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. [3] Annual data are monthly averages of crop year. [4] Includes eggs for hatching.

[1] As at end of period. Last month is preliminary. [2] Milk equivalents of cottage cheese and factory cheese other than cheddar, though not included in the monthly figures, are included in the monthly averages. [3] Includes butter and cheese imported and "In Transit". **Source: Dairy Factory Production (32-002), Dairy Review (23-001), Stocks of Dairy and Poultry Products (32-009), D.B.S.**

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted. [2] Includes stocks held by manufacturers, wholesalers and other warehouses. [3] The increase in percentage of capacity from October to November, 1960 reflects the fact that some mills worked more than the 25 days included in this formula as well as a reduction in total daily capacity from 171,000 hundredweight in October to 151,000 hundredweight in November. **Source: Grain Milling Statistics (32-003), Margarine Statistics (32-005), Quarterly Report on Processed Foods (32-007), D.B.S.**

[1] Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. [2] Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade. **Source: Retail Trade (63-005), D.B.S.**

Table 75: value of retail trade by types of business and provinces

monthly averages or months	lumber and building material	furniture, appliance and radio	restaurants	fuel dealers	drug stores	jewellery stores	miscellaneous	atlantic provinces	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia

[1] Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available. [2] Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. [3] Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. [4] Excluded from the above tabulation are charge accounts of motor vehicle dealers whose credit is extended mainly to businesses rather than to consumers. Instalment credit includes conditional sales agreements only. [5] Amount owing to oil companies, excluding commercial accounts. [6] Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds. [7] Figures for dates other than year ends are estimated on the basis of the loans by twelve companies. **Source: Department of Finance, Department of Agriculture, Bank of Canada.**

[1] As from January 1958 the indexes, the imports total and the "miscellaneous commodities" total exclude various non-commercial and special transactions previously included in our imports totals. For a more detailed explanation see Trade of Canada (Exports) 1960. [2] Includes pigs, ingots, blooms and billets, castings and forgings, ferro-alloys and rolling mill products. **Source: Trade of Canada, Imports (65-007), D.B.S.**

[1] Data in this table refer to railways with annual operating revenues of $500,000 or over. Monthly averages for 1960 and 1961 differ from the sum of the monthly data due to revisions which cannot be allocated by months. [2] As of January, 1958, statistics include the British Columbia Electric Railway. [3] As of January, 1958, the Hudson Bay Railway has been absorbed into the Canadian National Railway system. [4] Includes January to July interim payments related to recommendations of the Royal Commission on Railway Transportation. **Source: Railway Operating Statistics (52-206), D.B.S.**

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and undivided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [6] Excluding Canadian day to day loans. [7] Loans to grain dealers and exporters. [8] Loans to finance purchase of Canada Savings bonds at time of issue. [9] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. [10] Including loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

[1] Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks. [2] Subsidiary coin issued by the Mint less coin held by Bank of Canada and chartered banks in Canada. [3] Less total float, i.e. cheques and other items in transit (net). [4] At September 30, 1957, the deposit balances of religious, educational and welfare institutions used for business purposes, about $140 million, were reclassified from "personal savings deposits" to "other notice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date. **Source: Statistical Summary of Bank of Canada.**

Note: This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales. [1]The Canada totals by months for 1960 and 1961 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1960 and 1961 nor the monthly averages for 1961 have been revised to agree with the Canada total. **Source: Monthly Survey of Life Insurance Sales in Canada, Life Insurance Agency Management Association, Hartford, Conn.**

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (excluding government-owned companies and incorporated co-operatives). [1] Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction. [2] Includes, in addition to the industries listed, Tobacco and Leather. **Source: Corporation Profits (61-003), D.B.S.**

Seasonally Adjusted Economic Indicators.......Page S-1

Statistical Tables.......Page 1

List of Statistical Tables.......Inside Back Cover

A NOTE TO USERS

Changes in this issue:

(1) On page S-8, the seasonally adjusted prices of industrial common stocks (1935-39 = 100) have been deleted as the unadjusted data is now based on 1956 = 100 (See Table 99). Tests are proceeding on the seasonal adjustment of the revised data.

(2) Table 12, "Labour income by months" has been expanded by providing data for individual provinces in the Atlantic and Prairie Regions.

(3) Tables 86 to 101 have been rearranged and renumbered.

Back Records:

The following back records, raw and seasonally adjusted, are available on request from the Current Business Indicators Section, National Accounts and Balance of Payments Division, D.B.S. These are in addition to the back records found in the Annual Supplement.

(1) The series on inventories, shipments and new orders in Tables 33, 34, and 35 from 1952 to date.

(2) All the series on corporation profits before taxes (Table 98) are available quarterly from 1955 to date.

(3) The series on building permits by types (Table 57), namely residential, industrial, commercial, institutional and government permits are available from 1948 to date.

(4) The series on merchandise exports and imports in Table 83 for the European Common Market, European Free Trade Association and the O.E.C.D. countries from 1946 to date.

(5) Employment indexes from 1949 to date for the following series in Table 17: industrial composite, forestry, public utilities and finance.

(6) Labour income by provinces, as in Table 12, is available from 1947 to date.

(7) All retail trade series from 1947 to 1961 as in Table 75.

Other Material:

There is still available a very limited number of copies of reference paper No. 77 entitled "Seasonally Adjusted Economic Indicators, 1947-1955". It gives a survey of the theory problems and methods in the seasonal adjustment of time series. This paper is available on request while the supply lasts.

Annual Subscription: $5.00 — Single copies: 50c. each

This review and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications, may be ordered from the Information Services Division, Dominion Bureau of Statistics, Ottawa, Ontario, and remittances made payable to the Receiver General of Canada.

EMPLOYMENT AND EARNINGS PATTERNS OF CONTRIBUTORS TO UNEMPLOYMENT INSURANCE

1961

(With a comparative note on earnings distributions for beneficiaries)

Introduction

Records of individual contributions to the Unemployment Insurance Fund provide useful information regarding employment and earnings of persons in insured employment. Basic data permit classification of insured persons according to the number of their weekly contributions and the amount of these contributions. From claim documents it is possible to examine somewhat similar data for persons separating from employment and proving eligibility to benefit.

This article is concerned with data for the 12 months ending December 1961. The information on contributors has been obtained from a sampling of contribution documents in Regional Offices of the Unemployment Insurance Commission. The basic information supplied to the Bureau covers the number of calendar weeks during which contributions were made and the amount of contributions. It is thus possible to calculate the average amount of weekly contribution for each individual. Since contributions are based on earnings, the contributors may be distributed, on the basis of their average weekly contribution, into groups corresponding to earnings classes.

The data for 1961 are obtained from a subsample of some 10,000 contributors selected from the more than 200,000 records comprising a 5 per cent sample being processed. On the basis of earlier experience with sub-sampling, it is not expected that the 5 per cent sample will produce results related to earnings and employment which will vary significantly from those indicated by the sub-sample. The much larger sample of more than 200,000 cases is required in order to provide cross-classifications by sex and age.

Contributors to unemployment insurance constitute the bulk of the wage earning population. Hence, comparison of their patterns of employment at various earnings levels should be of general interest.

On separation from employment, insured persons usually file a claim for benefit. The weekly rate to which they are entitled is determined by their average earnings during the 30 qualifying weeks preceding the date of claim. Given these rates and the claimant's dependency status, weekly earnings can be estimated and earnings distributions for claimants compared with those for all contributors. However, the 30 qualifying weeks do not necessarily fall within a calendar year. Indeed for those proving entitlement early in 1961, the 30 week period will have occurred mainly during 1960.

Earnings

For 1961 average weekly earnings in insured employment were estimated at about $65 as compared with median earnings of $60. Average weekly wages and salaries, based on reports from employers usually employing 15 or more persons and published in "Employment and Payrolls"[1] were $78. It is worth while considering some of the factors associated with this substantial spread.

In the first place, the existence of an earnings ceiling of $5,460 for insurance coverage excludes many salaried persons in the higher earnings classes. Such persons would be included in payroll data. On the other hand, by virtue of the size of firm minimum, employees of small firms are excluded from payroll data. This also would tend to make the payroll survey figures higher than those from insurance data, since no such exclusion exists in insured employment.

Average weekly earnings for a third of the persons engaged in insured employment in 1961 were in the top earnings range of $69 and over. The per cent distribution of contributors by average weekly earnings, 1961 and 1956, is as follows:

Average weekly earnings in insured employment	Per cent	
	1961	1956
$		
All classes	**100**	**100**

63 " 69	13	
69 and over	33	

---

[1] "Employment and Payrolls", Catalogue No. 72-002, published in the Employment Section, Labour Division, DBS.

Changes in the distribution of weekly earnings under insured employment between 1956 and 1961 have been affected by two major factors. First, there has been an increase of about one-fifth in general wage levels during this period. Second, the earnings ceiling on insurable employment was moved up from $4,800 to $5,460, effective September, 1959. Concurrently, the former top class of $57 and over was broken up into $57-63, $63-69 and $69 and over.

It must be remembered that only the contributors' insured earnings are recorded. To the extent that these persons engage in non-insured employment, at a different earnings level, this pattern within earnings classes will be unrepresentative.

Employment

On the average, persons engaged in contributory employment for about 37 weeks in 1961. However, this pattern varies significantly, by earnings classes, as will be seen from the following table:

Range of average weekly earnings in covered employment	Average weeks contributed	Median weeks
$		
Totals	37	47
Under 15	11	4
15 but under 21	19	14
21 " 27	21	17
27 " 33	28	26
33 " 39	29	28
39 " 45	34	37
45 " 51	37	44
51 " 57	37	44
57 " 63	38	45
63 " 69	40	47
69 and over	45	50

Contributors averaging incomes of less than $27 a week worked less than half-a-year in insurable employment. On the other hand, persons earning $69 and over worked an average 45 weeks in insured employment. To some extent these variations are attributable to differences in age. Young people, particularly those just entering the labour market, tend to engage in covered employment for relatively short periods. This may be associated with problems of getting adjusted to the proper job. In some cases they are students who still spend most of the year in school. Some persons participate in the labour force only at certain times of the year, or their participation is limited to a short work week. Many married women are in this category. A short work week would automatically result in a relatively lower earnings level. However, past experience indicates a close relationship between duration of employment and levels of earnings.

The lower and middle earnings classes have a relatively higher proportion of women than the higher ones. However, the women's average period of insured employment is only slightly below that for men, the differential being less than a month. The highest earnings class is made up almost entirely of males who have comparatively steady employment.

The substantial gap between the average weeks (or arithmetic mean) and the median weeks is an indication of the lack of concentration around the arithmetic mean. In the lower earnings classes, short periods of insured employment are the norm, but the relatively few persons with the longer record pull up the average. For example, half the insured workers with average earnings of less than $15 work less than 4 weeks, and half work in excess of that, whereas the arithmetic mean is 11 weeks. This gap gradually narrows as earnings increase, until the position of the two measures is reversed. In the group as a whole, the median, at 47 weeks, is substantially above the arithmetic mean.

Beneficiaries[2]

It is useful to examine the distribution, by earnings classes, of persons fulfilling the contribution requirements for regular benefit during 1961.

---

[2] In this context, the term "beneficiaries" refers to persons establishing the right to regular benefit, though some may not have actually drawn any benefit. It excludes persons drawing benefit in 1961 if the benefit period was established during 1960.

Information on benefit periods established during 1961 is obtained on a 20 per cent sample basis and will be available shortly in the "Annual Report on Benefit Periods Established and Terminated", Catalogue No. 73-201 and published in the Unemployment Insurance Section, Labour Division, DBS.

Non-beneficiaries are a residual. The totals arising out of the sub-sample were inflated to 100 per cent and the numbers representing benefit periods established were subtracted. This method assumes that all persons classed as beneficiaries were contributors in 1961.

Average weekly earnings during 30 weeks qualifying period	Per cent distribution			
	All contributors	Beneficiaries	Non-beneficiaries	Beneficiaries as a per cent of contributors
$	(1)	(2)	(3)	(4)
All classes	**100**	**100**	**100**	**23**
Under 15	1	[1]	2	4
15 and under 21	2	1	3	13
21 " 27	5	3	5	17
27 " 33	7	6	7	20
33 " 39	7	7	7	23
39 " 45	7	8	7	25
45 " 51	8	9	8	25
51 " 57	8	9	7	27
57 " 63	9	12	9	29
63 " 69	13	18	11	31
69 and over	33	26	34	19

[1] Less than half of one per cent.

Both beneficiaries and non-beneficiaries display a marked concentration in the three highest classes. However, the top class contains only a quarter of the beneficiaries, whereas a third of non-beneficiaries are in this class.

Column (4) may be interpreted as a claim rate, which rises with earnings, reaching its peak in the second highest class and then declining sharply. The lower claim rates for the lower earnings classes are due partly to inability to qualify. Those in the highest class experience greater stability of employment. This record should be related to the following table on weeks of benefit authorized.

Since data covering weeks contributed are not available for beneficiaries, separately, the number of weeks authorized was examined for earnings classes. The following table presents arithmetic mean and median weeks authorized for the various earnings classes:

Average weeks authorized	Average weekly earnings during 30 weeks qualifying period	
	Arithmetic mean	Median
$		
All earnings classes	**28**	**24**
Under 15	28	24
15 but under 21	26	22
21 '' 27	27	22
27 '' 33	28	24
33 '' 39	28	24
39 '' 45	28	24
45 '' 51	29	24
51 '' 57	27	22
57 '' 63	27	21
63 '' 69	27	22
69 and over	32	28

Although relatively small proportions of low earnings employees qualify for benefit, there is very little evidence of a correlation between benefit weeks authorized and earnings, the average authorization remaining fairly constant for the various earnings classes, except the highest. Probably the main explanation stems from the fact that the duration authorized is based upon a two-year record of weeks contributed, except where a previous claim was established within that interval. In such a case, the period may be less than two years.[3] In some cases, then, the weeks authorized reflect insured employment over a two-year interval and hence cannot be used as a measure of insured employment during the year.

---

[3] See Section 45 (2) of the Unemployment Insurance Act.

INDUSTRIAL PRODUCTION (More detail in Table 11)

The index of industrial production advanced almost 1% in August to 188.2, the result of substantial gains in mining and electric power and gas utilities. Manufacturing output was lower by one-half of 1% during the month.

LABOUR FORCE (More detail in Table 14)

Employment and the index of unemployment declined between August and September largely as a result of students leaving the labour market and re-entering schools. During the summer months, a record number of students found temporary jobs and with their return to school this fall, total employment and unemployment decreased more than usual.

		civilian labour force

RETAIL TRADE, MOTOR VEHICLE SALES (More detail in Tables 47 and 75)

Total retail trade fell off by about 2.5% in August due primarily to decreases in motor vehicle dealers, furniture and appliance stores and fuel dealers.

Sales of all types of new motor vehicles showed marked declines in August with European passenger cars decreasing noticeably for the third consecutive month.

	retail trade total	retail trade (ex. motor vehicle dealers)	motor vehicle dealers	department stores	new motor vehicle sales

EXPORTS AND IMPORTS (More detail in Table 83)

Total exports increased in August reflecting a major gain to the United Kingdom.
Imports rose by 8% in July due to a sharp increase from the United States.

		exports (including re-exports)				imports			
		all countries	United States	United Kingdom	all other countries	all countries	United States	United Kingdom	all other countries

---

[1] Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. [2] Includes residual error of estimate. Source at bottom of Table 10.

[1] The statistics for individual industries exclude strikes involving less than 100 workers. The total for all industries continues to include all strikes. [2] The annual and monthly "all industries" totals for 1960 and 1961 have been revised and are no longer quite comparable with the data for individual industries, apart from the difference described in footnote 1. **Source: Labour Gazette, Department of Labour.**

[1] The data in Tables 17 to 27 are based on reports from employers usually employing 15 persons and over and covering the respondents last pay period(s) in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and domestic service. [3] Includes storage and communication. [4] Includes insurance and real estate. [5] Excludes public administration and defence and such community services as health and education. **Source: Employment and Payrolls, (72-002), D.B.S.**

---

[1] See footnote 1, Table 17.
[2] See footnote 2, Table 17.
[3] Employment indexes in manufacturing and in its durable and non-durable components are given in Table 17.
[4] In addition to those listed, tobacco products, leather, printing and publishing and miscellaneous industries are included in non-durable manufacturing.

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Industry values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total manufacturing inventory owned by manufacturers including warehouse stocks. [3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [4] End of period. [5] Classified according to the Standard Industrial Classification. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.**

[1] Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Excluding shipments for re-processing at maker's own plants. [3] Imports include, in addition to all other shapes, ingots, cast iron pipe, wire and wire ropes. Imports exclude castings (except cast iron pipe), forgings, fittings and couplings. **Source: Primary Iron and Steel (41-001), D.B.S.**

---

[1] These totals include all generating agencies producing over ten million kilowatt hours per year. [2] These columns include all generating utilities and generating industries respectively, producing over ten million kilowatt hours per year. [3] Less imports. [4] Total net generation less net exports. [5] Mainly the amount used in electric boilers. **Source: Electric Power Statistics, (57-001), D.B.S.**

[1] Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area. [2] The data on building permits are collected for 1,100 municipalities and individual figures are available on request. Some of the annual totals for 1960 and 1961 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. [1] The coverage was extended to 507 municipalities in 1948, and as of 1961, stands at 1,100, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: **Building Permits (64-001), D.B.S.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D.B.S.**

---

[1] Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected.
[2] Planks and boards, flooring and square timber.
[3] Hollow blocks including fireproofing and load-bearing tile.
[4] For building insulation only.
[5] Figures cover the production of firms which normally account for 90 per cent of the total for Canada.
[6] Includes concrete chimney blocks, up to December 1959.
[7] Factory sales of firms which normally account for 96% of total Canadian production.

*See also Tables 29 and 30. [1] Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1961 are final prices. From August 1, 1961 to date, the western grain prices used in the index are initial prices only for wheat, oats and barley. [2] Includes subsidy on hogs. [3] Based on price for hogs including Dominion premium up to September 1960. A rise in ratio favours production of beef. [4] Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights. **Source: Coarse Grains Quarterly (22-001), Stocks of Meat and Lard (32-012), Index Numbers of Farm Prices of Agricultural Products (62-004), Livestock and Meat Trade Report, Dept. of Agriculture, D.B.S.**

[1] Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Revised to include bagged seed wheat previously excluded. [2] Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. [3] Annual data are monthly averages of crop year. [4] Includes eggs for hatching.

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted. [2] Includes stocks held by manufacturers, wholesalers and other warehouses. [3] The increase in percentage of capacity from October to November, 1960 reflects the fact that some mills worked more than the 25 days included in this formula as well as a reduction in total daily capacity from 171,000 hundredweight in October to 151,000 hundredweight in November. **Source: Grain Milling Statistics (32-003), Margarine Statistics (32-005), Quarterly Report on Processed Foods (32-007), D.B.S.**

[1] Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. [2] Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade. **Source: Retail Trade (63-005), D.B.S.**

Table 75: value of retail trade by types of business and provinces

monthly averages or months	lumber and building material	furniture, appliance and radio	restaurants	fuel dealers	drug stores	jewellery stores	miscellaneous	atlantic provinces	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia

---

[1] Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available. [2] Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. [3] Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. [4] Excluded from the above tabulation are charge accounts of motor vehicle dealers whose credit is extended mainly to businesses rather than to consumers. Instalment credit includes conditional sales agreements only. [5] Amount owing to oil companies, excluding commercial accounts. [6] Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds. [7] Figures for dates other than year ends are estimated on the basis of the loans by twelve companies. **Source: Department of Finance, Department of Agriculture, Bank of Canada.**

[1] As from January 1958 the indexes, the imports total and the "miscellaneous commodities" total exclude various non-commercial and special transactions previously included in our imports totals. For a more detailed explanation see Trade of Canada (Exports) 1960. [2] Includes pigs, ingots, blooms and billets, castings and forgings, ferro-alloys and rolling mill products. **Source: Trade of Canada, Imports (65-007), D.B.S.**

[1] Data in this table refer to railways with annual operating revenues of $500,000 or over. Monthly averages for 1960 and 1961 differ from the sum of the monthly data due to revisions which cannot be allocated by months. [2] Includes January to July interim payments related to recommendations of the Royal Commission on Railway Transportation. **Source: Railway Operating Statistics (52-003) monthly, (52-206) annual, D.B.S.**

[1] Revised series with coverage limited to business failures under the Bankruptcy and Winding Up Acts, excluding individuals not operating businesses as such. [2] In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commercial Failures (61-002), D.B.S.**

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and undivided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [6] Excluding Canadian day to day loans. [7] Loans to grain dealers and exporters. [8] Loans to finance purchase of Canada Savings bonds at time of issue. [9] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. [10] Including loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

---

[1] Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks. [2] Subsidiary coin issued by the Mint less coin held by Bank of Canada and chartered banks in Canada. [3] Less total float, i.e. cheques and other items in transit (net). [4] At September 30, 1957, the deposit balances of religious, educational and welfare institutions used for business purposes, about $140 million, were reclassified from "personal savings deposits" to "other notice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date. **Source: Statistical Summary of Bank of Canada.**

Note: This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales. [1]The Canada totals by months for 1960 and 1961 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1960 and 1961 nor the monthly averages for 1961 have been revised to agree with the Canada total. **Source: Monthly Survey of Life Insurance Sales in Canada, Life Insurance Agency Management Association, Hartford, Conn.**

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (excluding government-owned companies and incorporated co-operatives). [1]Includes, in addition to the industries listed, Agriculture, Forestry, Fishing and Construction. [2]Includes, in addition to the industries listed, Tobacco and Leather. **Source: Corporation Profits (61-003), D.B.S.**

A NOTE TO USERS

Changes in this issue:

In table 98, "Corporation profits before taxes", the Iron and steel group and the Non-ferrous metal group have been combined into one new group entitled "Metal industries".

There were also minor changes in the group titles and footnotes.

This is the result of the industrial classification used which has been based on the classifications outlined in the revised D.B.S. Standard Classification Manual, Cat. No. 12-501, Occasional.

Months for Cyclical Dominance (MCD)

The user will find this expression in abbreviated form in several tables throughout this publication. The measure indicates the number of months required on the average for emergence of the cyclical trend from the seasonally adjusted series. An MCD of five implies that a five-month moving average is required in order to offset irregular movements and allow examination of the underlying cyclical trend.

The MCD is used in Tables 11, 12, 17, 33, 34, 35, 36, 57, 75 and 83 to indicate the relative variability of the series. Its value can range only from one to six months, since values greater than this are not calculated. In the S section, for series with an MCD of four or more, five-term moving averages are used to aid in charting. These averages are correct for series with an MCD of five, but for MCD's of four or six they are used as approximations to avoid the problem of centering even-term averages. The MCD is not charted for series with values of three or less, since it does not increase the clarity of the charted series.

Back Records:

The following back records, raw and seasonally adjusted, are available on request from the Current Business Indicators Section, National Accounts and Balance of Payments Division, D.B.S. These are in addition to the back records found in the Annual Supplement.

(1) The series on inventories, shipments and new orders in Tables 33, 34, and 35 from 1952 to date.

(2) All the series on corporation profits before taxes (Table 98) are available quarterly from 1955 to date.

(3) The series on building permits by types (Table 57), namely residential, industrial, commercial, institutional and government permits are available from 1948 to date.

(4) The series on merchandise exports and imports in Table 83 for the European Common Market, European Free Trade Association and the O.E.C.D. countries from 1946 to date.

(5) Employment indexes from 1949 to date for the following series in Table 17: industrial composite, forestry, public utilities and finance.

(6) Labour income by provinces, as in Table 12, is available from 1947 to date.

(7) All retail trade series from 1947 to 1961 as in Table 75.

Other Material:

There is still available a very limited number of copies of reference paper No. 77 entitled "Seasonally Adjusted Economic Indicators, 1947-1955". It gives a survey of the theory problems and methods in the seasonal adjustment of time series. This paper is available on request while the supply lasts.

Annual Subscription: $5.00 — Single copies: 50c. each

This review and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications, may be ordered from the Information Services Division, Dominion Bureau of Statistics, Ottawa, Ontario, and remittances made payable to the Receiver General of Canada.

THE 1961 WORK EXPERIENCE OF THE CANADIAN LABOUR FORCE

Introduction

A special inquiry into the work experience of Canadians in 1961 was made in conjunction with the January 1962 labour force survey. For all people who had been in the labour force in 1961, a quarterly record was obtained of weeks worked, weeks spent looking for work, and weeks not in the labour force. The recall of information in this detail is difficult. However, it seemed likely that useful data on work patterns for the full year might be obtained. Subsequent comparisons of work pattern survey records with the regular monthly survey data for 1961, suggest that the recall of periods of employment was fairly good, while the amount of time spent looking for work may have been underestimated by approximately one fifth. As might be expected, there was more evidence of inaccurate recall in the first part of the year than towards the end when events were still fresh in the minds of persons interviewed.

By relating special work pattern data to the usual data on personal characteristics collected in the regular January 1962 Labour Force Survey, it was possible to produce a variety of tabulations relating work patterns to age, sex, marital status, geographical regions, and latest industrial and occupational attachment. It was also possible to examine work patterns of different groups which had withdrawn from the labour force by January 1962.

The following notes provide brief comments on the 1961 labour force and a summary of its work experience during the year.

The 1961 Labour Force

The number of persons who either worked or looked for work in 1961 totalled 7,068,000, about half a million more than the average number in the labour force during the year. By January 1962, withdrawals from the 1961 labour force were close to 700,000, or about 10 per cent of the total. Nearly one half of withdrawals were reported in January 1962 as keeping house, and practically all of the remainder were going to school, or were retired or voluntarily idle.

The January 1962 status of people who were in the labour force in 1961 is shown in the following table:

January 1962 Status of Persons in the 1961 Labour Force

Status	Total	Men	Women
	in thousands		
Employed	5,820	4,196	1,624
Unemployed	530	465	65
Keeping house	318	[1]	317
Going to school	244	168	76
Retired or voluntarily idle	127	121	[1]
Other	29	28	[1]
Totals	7,068	4,978	2,090

[1] Estimate below 10,000.

In January 1962 about 9 per cent of all persons keeping house (virtually all women) had been in the 1961 labour force. Also, more than 20 per cent of students and nearly 18 per cent of the retired or voluntarily idle had been in the labour force during the preceding year.

Percentages of January 1962 Non-labour Force Groups in the 1961 Labour Force

Non-labour force groups	Total	Men	Women
Keeping house	8.8	–	8.8
Going to school	20.7	26.4	13.9
Retired or voluntarily idle	17.7	21.6	1.3

Work Experience in 1961

About two thirds of the 1961 labour force had jobs for the full year, with no period out of the labour force. Approximately one sixth worked varying periods of the year without spending any time looking for work, and almost as many more had a mixed record of working and looking for work. A very small number had looked for work for 40 weeks or more without being able to find a job at any time during the year.

Distribution of 1961 Labour Force according to Work Experience

	Total	Men	Women
	in thousands		
Worked a complete year (50 weeks +)	4,679	3,470	1,209
Worked part of year with no unemployment	1,227	577	650
Worked and looked	1,102	884	218
Looked 40+ weeks without getting work	60	47	13
Totals	**7,068**	**4,978**	**2,090**

The two groups which worked part of the year are of special interest. Each one formed about one sixth of the labour force, but whereas women had a slight preponderance among those who did not look for work, men were much more numerous in the group which experienced some unemployment.

Of those who worked less than a complete year in 1961, it may be assumed that some fraction would be steadily employed people who had obtained regular employment in 1961. Of the 1.2 million persons in this group, there were more than 100,000 who worked 48 or 49 weeks. However, more than half of them worked six months or less without any unemployment.

Withdrawals from the 1961 Labour Force

As already noted, nearly 700,000 persons withdrew from the labour force during 1961. In January 1962, most of these people were going to school, keeping house, or were retired or voluntarily idle. Brief notes have been included on these three marginal groups to give some idea of their work experience.

Women who Withdrew from the Labour Force to Keep House

In January 1962, there were 3,624,000 persons keeping house, and of these 317,000 were women who had been in the labour force in 1961. The following points stand out in a work pattern diagram showing these women classified according to numbers of weeks spent working and looking for work in 1961.

1. Only 38,000 of the 317,000 had looked for work at any time. The remaining 279,000 had obtained jobs apparently without any period of looking for work.
2. There were 200,000 women (about two thirds) who worked six months or less.
3. Only 37,000, or less than 12 per cent of the total had withdrawn from the labour force after working steadily throughout 1961, i.e., had worked 50 weeks or more. It is possible that some fraction of these women may have looked for work prior to 1961, but this would still leave the total number who had looked for work quite small.

The work pattern of women who moved out of the labour force to keep house was quite different from that of other women in the labour force. All told, 2,090,000 women were in the labour force for some part of 1961, and the majority of them worked the full year, whereas less than 12 per cent of withdrawals had a comparable work experience.

Women in the Labour Force 1961

	Total	Worked 50+ weeks	Percentage working 50+ weeks
	in thousands		
Single	789	489	62
Married	1,114	596	54
Other	187	130	70
Totals	**2,090**	**1,215**	**53**

Persons who Withdrew from the 1961 Labour Force to Go to School

In January 1962, a total of 243,000 persons were recorded as going to school following some period of labour force attachment in 1961. Of these, 167,000 were males, and 76,000 females. Work patterns for both groups were similar. About 60 per cent of the total worked three months or less, and nearly 90 per cent did not report any time spent looking for work.

Persons who Withdrew from the 1961 Labour Force to Retire or Become Voluntarily Idle

This group was practically all men. Of the 128,000 total, fewer than 10,000 were women. Unlike persons who withdrew to keep house, or to attend school, this group showed no pronounced tendency to work for a small part of the year. Nearly half of them worked more than six months. However, like other groups withdrawing from the labour force, a very small proportion spent any time looking for work.

POST-WAR IMMIGRANTS IN THE LABOUR FORCE

February 1956 to February 1962

Since 1956, post-war immigrants in the Canadian labour force have been identified twice each year in regular Labour Force Surveys. This has made it possible to examine labour force participation of immigrants over a period of years, and to compare immigrants with other members of the labour force.

In the short notes which follow, post-war immigrants, for the sake of brevity, will sometimes be referred to simply as **immigrants,** while other members of the labour force will be called **other Canadians** although it is recognized that this group will include a number who are not Canadian-born.

The Post-war Immigrants

The flow of immigrants into Canada had already been large before this study was instituted. In February 1956, the Labour Force Survey estimate of the post-war immigrant population, 14 years of age and over, was 659 thousand. By February 1962, it had reached 1.2 million and immigrants formed 12 per cent of the Canadian labour force.

In the six year period ending in February 1962, immigrants accounted for more than one third of the net increase in the total population of labour force age. Because their participation rates were higher than those for other Canadians, immigrants also accounted for about 40 per cent of the net increase in employment during this period.

TABLE A. Labour Force Participation

February 1956 and February 1962

	Civilian Non-institutional population 14 years and over		Labour force		Labour force participation rates	
	Post-war immigrants	Other Canadians	Post-war immigrants	Other Canadians	Post-war immigrants	Other Canadians
	in thousands				rates per hundred	
February 1956	659	10,055	430	5,159	65	51
February 1962	1,207	10,933	767	5,656	64	52
Change	+ 548	+ 878	+ 337	+ 497	− 1	+ 1

Labour Force Experience of Early and Recent Post-war Immigrants

A comparison was made of the labour force experience of immigrants who arrived between 1946 and 1955 and those who came to Canada between 1956 and 1961. The distribution of these two groups according to labour force status did not vary materially. Labour force participation among the later arrivals was slightly higher, and the same was true of their rate of unemployment.

TABLE B. Labour Force Status of Post-war Immigrants in October 1961, by Period of Arrival

Labour force status	Period of arrival	
	1946-55	1956-61
	in thousands	
Population 14 years and over	746[1]	451
Civilian labour force	475	302
Employed	454	286
Unemployed	21	16
Not in labour force	271	149
Labour force participation rates	64	67
Unemployment rates	4	5

[1] Table A shows 659 thousand post-war immigrants, 14 years and over, at the time of the February 1956 survey. Table B shows 746 thousand post-war immigrants, 14 years and over, reported in the October 1961 survey as arriving between 1946 and 1955. This discrepancy may be due in some measure to sampling variability and faulty memory recall. However, a substantial part of it is accounted for by immigrant children who passed the age of 14 between the beginning of 1956 and the end of 1961.

Regional Distribution

More than one half of post-war immigrants have settled in Ontario and another one sixth in Quebec. For Canada as a whole, they formed 10 per cent of the population of working age by the end of 1961. Regional percentages were somewhat higher than this for Ontario and British Columbia, and lower in other parts of the country.

TABLE C. Regional Distribution of the Civilian Non-institutional Population, October 1961

(14 years of age and over)

Region	Percentage distribution[1]		Post-war immigrants	Other Canadians	Immigrants as a percentage of total population 14 years and over
	Post-war immigrants	Other Canadians			
			in thousands		
Atlantic	2	11	23	1,195	2
Quebec	16	30	194	3,247	6
Ontario	56	33	672	3,560	16
Prairie	15	17	174	1,888	8
British Columbia	11	9	134	986	12
Canada	**100**	**100**	**1,197**	**10,876**	**10**

[1] Labour force distributions were almost identical with those for the civilian non-institutional population. In October 1961, the labour force was made up of 777,000 immigrants and 5,761,000 other Canadians.

Unemployment

Unemployment rates have been slightly higher, on average, for post-war immigrants than for other Canadians although in October 1961, they were almost identical. Differences for women in the two groups do not appear to have been significant, but rates for male immigrants tended to be slightly higher than those for other Canadians, particularly in the winter months. The main factor in higher unemployment rates for immigrants has been their relatively large representation in industries and occupations subject to have average unemployment. Although labour force participation in the younger age groups was somewhat higher for immigrants, unemployment rates standardized for age did not differ materially from actual rates.

TABLE D. Unemployment Rates,[1] 1956 and 1961

Period	Both sexes		Men	
	Post-war immigrants	Other Canadians	Post-war immigrants	Other Canadians
February 1956	6.5	6.0	7.9	7.0
September 1956	2.0	2.0	2.5	2.2
February 1961	12.2	11.2	15.2	13.5
October 1961	4.8	4.9	5.5	5.5

[1] The sample of unemployed immigrant women was too small to compute reliable unemployment rates.

•

Prior to 1961, immigrants experienced somewhat higher unemployment rates than other Canadians. However, they appear to remain unemployed for shorter periods of time. Percentages of immigrants unemployed for less than one month have been consistently higher than for other Canadians. Conversely, percentages of other Canadians unemployed for periods in excess of three months have generally been higher than for post-war immigrants.

Age Distribution

Immigrants were concentrated more heavily in the 25-44 age range than were other Canadians of working age, and there were relatively fewer of them above that level. This has acted as a partial offset to the relatively low birth-rates of the nineteen-thirties. Greater concentration in the prime working years has accounted in part for higher labour force participation among immigrants.

TABLE E. Age Distribution, Civilian Non-institutional Population, October 1961

(Percentage distribution)

Sex and age	Post-war immigrants	Other Canadians
Men:		
14-19	6	8
20-24	5	5
25-44	30	18
45-64	9	14
65+	1	6
Women:		
14-19	6	7
20-24	6	5
25-44	28	18
45-64	8	13
65+	1	6
Totals	**100**	**100**

In order to gain some idea of the contribution of age differences to higher immigrant labour force participation, rates for all surveys were standardized on the basis of the October 1961 distribution of non-immigrants. Results were sufficiently alike for all survey dates to use October 1961 figures for illustrative purposes. It may be observed from Table E that age seems to account for most of the difference among men, but for a much smaller part of the difference for women.

TABLE F. Standardized Labour Force Participation Rates, October 1961

(Standardized on basis of October 1961 non-immigrant age distribution)

	Post-war immigrants (1)	Other Canadians (2)	(1)-(2) (3)	Original difference in actual rates
Men	82	78	4	12
Women	35	28	7	11
Both sexes	58	53	5	12

Marital Status of Women with Jobs

The marital status distribution of immigrant and other Canadian women with jobs differs materially. The proportion of single immigrant women is lower than for other single women. However, proportionately more married immigrant women had jobs in 1961 than other married women. This is attributable to a lower proportion of single women among the total numbers of female immigrants, rather than any basic difference in labour force participation rates.[1]

---

[1] See Table XV, Volume 10—Census of Canada 1951.

TABLE G. Marital Status of Women with Jobs, October 1961

Marital status	Percentage distribution		Number of immigrant women
	Post-war immigrants	Other Canadians	
			in thousands
Single	27	43	60
Married	67	47	148
Widowed and divorced	6	10	13
Totals	**100**	**100**	**221**

Occupations

Proportions of immigrants in manufacturing and mechanical trades, and in service occupations of various kinds, including health service were relatively large. The total number of labourers and unskilled immigrant workers in October 1961 was less than 10 per cent of the total. There was little difference in the proportions of managerial and professional occupations as between immigrants and other Canadians. The urban character of post-war immigration is reflected in the low percentage (5) of this group in agricultural occupations as compared with 12 per cent for other Canadians.

TABLE H. Persons with Jobs classified by Occupation, October 1961

Occupational group	Percentage distribution		Number of post-war immigrants
	Post-war immigrants	Other Canadians	
			in thousands
Managerial	7	10	50
Professional	11	10	79
Clerical	10	13	77

Manufacturing	25	16	189
Construction	9	5	64
Unskilled	8	5	62
Totals	**100**	**100**	**740**

[1] Less than 10,000.

Industrial Attachment

There are relatively few post-war immigrants in agriculture and other primary industries. Their numbers were proportionately greater in manufacturing and construction than for other Canadians, and approximately the same in service industries.

TABLE I. Persons with Jobs classified by Industry, October 1961

Industry group	Percentage distribution		Number of post-war immigrants
	Post-war immigrants	Other Canadians	
			in thousands
Agriculture	5	12	34
Other primary	1	3	10
Manufacturing	35	24	258

Service	25	25	187
Totals	**100**	**100**	**740**

[1] Includes utilities.

Class of Worker Distribution

The preponderance of paid workers (employees) is even greater among immigrants than among other Canadians. In the fall of 1961, 90 per cent of immigrants with jobs were in this category as compared to 81 per cent of other Canadians. However, by 1961 four per cent of all immigrants had become employers compared to 6 per cent of other Canadians with jobs. More than 30,000 post-war immigrants were employers, and another 34,000 were self-employed. The moderate difference in class of worker distributions for immigrants and other Canadians, is attributable in large part to the small proportion of immigrants in agriculture where the proportion of employers and self-employed is relatively high.

TABLE J. Class of Worker Distribution of Persons with Jobs

Class of worker	Percentage distribution		Post-war immigrants
	Post-war immigrants	Other Canadians	
			in thousands
Employer	4	6	31
Self-employed	5	10	34
Paid worker	89	81	663
Unpaid family worker	2	3	12
Totals	**100**	**100**	**740**

Weekly Hours of Work

The majority of Canadians with jobs in non-agricultural industry work from 35 to 44 hours a week. For post-war immigrants the number in this range exceeds 70 per cent of the total, while for other Canadians, the corresponding percentage is between 60 and 65. Conversely, a smaller percentage of post-war immigrants than of other Canadians work more than 44 hours a week. These differences are mainly attributable to the small number of immigrant workers in agriculture.

TABLE K. Percentage Distribution of Hours of Work, February 1961[1]

Hours of work	Percentage distribution	
	Post-war immigrants	Other Canadians
1-34	11	12
35-44	71	63
45+	18	25
Totals	**100**	**100**

[1] February used because Thanksgiving affected October figures of hours of work.

October 1961 Re-enumeration Survey of Post-war Immigrant Data

Two per cent of October 1961 Labour Force Survey households were re-enumerated on a random basis by regular staff from DBS Regional Offices. In re-enumeration the original record was carried by the interviewer on the understanding that no reference was to be made to it until the re-enumeration interview was completed. At that time any differences in the first and second records were noted and reconciliations effected.

Differences between the first and final records were not extensive but they did reveal tendencies which are of interest.

1. A small number of persons recorded as non-immigrants by the original enumerator were later classified as immigrants who had reached Canada prior to 1946.

2. Both enumerations turned up almost identical numbers of post-war immigrants arriving between 1946 and 1953.

3. A slightly smaller number of immigrants arriving between 1954 and 1961 were enumerated in the actual survey than by the re-enumerators. However, the difference appeared to be of little consequence, particularly as it has been established that there is little difference in the labour force experience of post-war immigrants arriving in the 1946-53 and 1954-61 periods.

Percentage Distribution of the Civilian Non-institutional Population

(14 years and over)

Group	Original enumeration	Re-enumeration
Non-immigrants	71.8	70.5
Immigrants — before 1946	13.6	14.5
1946-1953	8.3	8.3
1954-1961	6.3	6.7
Total population	**100.0**	**100.0**

INDUSTRIAL PRODUCTION (More detail in Table 11)

The index of industrial production rose by 0.3% in September to 189.3 from the revised August level of 188.7. With little change in mining and a 3% decline in electric power and gas utilities, the strength in the total index was due to increases concentrated in transportation equipment and wood products of durable manufacturing.

		total industrial production	manufacturing production			mining production	electricity and gas	total iron and steel
			total	durables	non-durables

EMPLOYMENT, SELECTED INDUSTRIES (More detail in Table 17)

Employment in manufacturing rose a little in September reflecting offsetting movements in its two major components, durables and non-durables. There were small declines posted in mining, construction, transport and services while trade remained about unchanged.

		manufacturing							
		total	non-durable	durable	trade	service	transport	construction	mining
		1949 = 100

RETAIL TRADE, MOTOR VEHICLE SALES (More detail in Tables 47 and 75)

Retail trade advanced more than 1% in September mainly on the strength of increased sales in department stores, fuel dealers and the miscellaneous stores group.

Sales of all types of new motor vehicles declined in September except European passenger type cars which rose sharply.

		retail trade total	retail trade (ex. motor vehicle dealers)	motor vehicle dealers	department stores	new motor vehicle sales

---

[1] Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stacks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. [2] Includes residual error of estimate. Source at bottom of Table 10.

[1] The statistics for individual industries exclude strikes involving less than 100 workers. The total for all industries continues to include all strikes.
[2] The annual and monthly "all industries" totals for 1960 and 1961 have been revised and are no longer quite comparable with the data for individual industries, apart from the difference described in footnote 1. **Source: Labour Gazette, Department of Labour.**

[1] The data in Tables 17 to 27 are based on reports from employers usually employing 15 persons and over and covering the respondents last pay period(s) in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and domestic service. [3] Includes storage and communication. [4] Includes insurance and real estate. [5] Excludes public administration and defence and such community services as health and education. **Source: Employment and Payrolls, (72-002), D.B.S.**

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Industry values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total manufacturing inventory owned by manufacturers including warehouse stocks. [3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [4] End of period. [5] Classified according to the Standard Industrial Classification. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.**

[1] Releases of domestically manufactured tobacco for consumption in Canada. [2] End of period. [3] The production of beer is shown in thousand barrels of 25 gallons each. [4] Includes bottling of imported liquors. **Sources: Quarterly Stocks and Consumption of Unmanufactured Tobacco, (32-014), D.B.S., Department of National Revenue.**

[1] Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Excluding shipments for re-processing at maker's own plants. [3] Imports include, in addition to all other shapes, ingots, cast iron pipe, wire and wire ropes. Imports exclude castings (except cast iron pipe), forgings, fittings and couplings. **Source: Primary Iron and Steel (41-001), D.B.S.**

[1] These totals include all generating agencies producing over ten million kilowatt hours per year. [2] These columns include all generating utilities and generating industries respectively, producing over ten million kilowatt hours per year. [3] Less imports. [4] Total net generation less net exports. [5] Mainly the amount used in electric boilers. **Source: Electric Power Statistics, (57-001), D.B.S.**

[1] Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area. [2] The data on building permits are collected for 1,100 municipalities and individual figures are available on request. Some of the annual totals for 1960 and 1961 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. **Source: Building Permits (64-001), D.B.S.**

[1] The coverage was extended to 507 municipalities in 1948, and as of 1961, stands at 1,100, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. **Source: Building Permits (64-001), D.B.S.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D.B.S.**

[1] Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected. [2] Planks and boards, flooring and square timber. [3] Hollow blocks including fireproofing and load-bearing tile. [4] For building insulation only. [5] Figures cover the production of firms which normally account for 90 per cent of the total for Canada. [6] Includes concrete chimney blocks, up to December 1959. [7] Factory sales of firms which normally account for 96% of total Canadian production. **Source: Concrete Products (44-002), Products made from Canadian clays (44-005), Asphalt Roofing (45-001), Rigid Insulating Board (36-002), Iron Castings and Cast Iron Pipes and Fittings (41-004), Steel Wire and Specified Wire Products (41-006), Gypsum Products (44-003), Mineral Wool (44-004), Sales of Paints, Varnishes and Lacquers (46-001) and Trade of Canada, Imports (65-007), Exports (65-004), D.B.S.**

*See also Tables 29 and 30. [1] Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1961 are final prices. From August 1, 1961 to date, the western grain prices used in the index are initial prices only for wheat, oats and barley. [2] Includes subsidy on hogs. [3] Based on price for hogs including Dominion premium up to September 1960. A rise in ratio favours production of beef. [4] Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights. **Source: Coarse Grains Quarterly (22-001), Stocks of Meat and Lard (32-012), Index Numbers of Farm Prices of Agricultural Products (62-004), Livestock and Meat Trade Report, Dept. of Agriculture, D.B.S.**

---

[1] Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Revised to include bagged seed wheat previously excluded. [2] Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. [3] Annual data are monthly averages of crop year. [4] Includes eggs for hatching.

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted. [2] Includes stocks held by manufacturers, wholesalers and other warehouses. [3] The increase in percentage of capacity from October to November, 1960 reflects the fact that some mills worked more than the 25 days included in this formula as well as a reduction in total daily capacity from 171,000 hundredweight in October to 151,000 hundredweight in November. **Source: Grain Milling Statistics (32-003), Margarine Statistics (32-005), Quarterly Report on Processed Foods (32-007), D.B.S.**

---

[1] Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. [2] Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade. **Source: Retail Trade (63-005), D.B.S.**

Table 75: value of retail trade by types of business and provinces

[1] Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available. [2] Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. [3] Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. [4] Excluded from the above tabulation are charge accounts of motor vehicle dealers whose credit is extended mainly to businesses rather than to consumers. Instalment credit includes conditional sales agreements only. [5] Amount owing to oil companies, excluding commercial accounts. [6] Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds. [7] Figures for dates other than year ends are estimated on the basis of the loans by twelve companies. **Source: Department of Finance, Department of Agriculture, Bank of Canada.**

---

[1] As from January 1958 the indexes, the imports total and the "miscellaneous commodities" total exclude various non-commercial and special transactions previously included in our imports totals. For a more detailed explanation see Trade of Canada (Exports) 1960. [2] Includes pigs, ingots, blooms and billets, castings and forgings, ferro-alloys and rolling mill products. **Source: Trade of Canada, Imports (65-007), D.B.S.**

[1] Data in this table refer to railways with annual operating revenues of $500,000 or over. Monthly averages for 1960 and 1961 differ from the sum of the monthly data due to revisions which cannot be allocated by months. [2] Includes January to July interim payments related to recommendations of the Royal Commission on Railway Transportation. **Source: Railway Operating Statistics (52-003) monthly, (52-206) annual, D.B.S.**

[1] Revised series with coverage limited to business failures under the Bankruptcy and Winding Up Acts, excluding individuals not operating businesses as such. [2] In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commercial Failures (61-002), D.B.S.**

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and undivided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [6] Excluding Canadian day to day loans. [7] Loans to grain dealers and exporters. [8] Loans to finance purchase of Canada Savings bonds at time of issue. [9] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. [10] Including loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

[1] Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks. [2] Subsidiary coin issued by the Mint less coin held by Bank of Canada and chartered banks in Canada. [3] Less total float, i.e. cheques and other items in transit (net). [4] At September 30, 1957, the deposit balances of religious, educational and welfare institutions used for business purposes, about $140 million, were reclassified from "personal savings deposits" to "other notice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date. **Source: Statistical Summary of Bank of Canada.**

Note: This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales. [1]The Canada totals by months for 1960 and 1961 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1960 and 1961 nor the monthly averages for 1961 have been revised to agree with the Canada total. **Source: Monthly Survey of Life Insurance Sales in Canada, Life Insurance Agency Management Association, Hartford, Conn.**

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (Excluding government-owned companies and incorporated co-operatives).

[1] Includes Tobacco, Leather and Miscellaneous Manufacturing Industries.

[2] Includes Electric Power, Gas and Water Utilities.

[3] Includes Community, Business and Personal Service Industries.

[4] Includes Agriculture, Forestry, Fishing and Construction.

A NOTE TO USERS

Changes in this issue:

(1) A new page S-10 has been added to this month's issue consisting of ten price series which are *not seasonally adjusted.* The ten series are as follows: 1) the general wholesale price index 2) the index of thirty industrial materials 3) the index of import prices 4) the index of export prices 5) the index of industrial common stocks 6) total consumer price index (C.P.I.) with four of its components, namely: 7) food 8) non-durable goods ex. food 9) durable goods and 10) services.

The indexes for both exports and imports are different from most price indexes as many items are based on unit values rather than on prices of specified commodities.

None of the above prices are seasonally adjusted. While some seasonality is present it is not pronounced and hence does not interfere greatly with the use of the series as economic indicators in their original or unadjusted form.

(2) The headings of the first 9 pages of the S section have been changed to read: "Selected Economic Indicators—Seasonally Adjusted". The new page S-10—being introduced this month—is headed: "Selected Economic Indicators—Not adjusted for Seasonality". These titles are emphasized here to indicate that the S section will now contain both seasonally adjusted series and also data *not adjusted* for seasonality.

(3) The series "Wholesale prices of industrial materials" 1935–39 = 100 which was unadjusted for seasonal variation and which was carried on page S-8 is shifted to the new page S-10. It is now called "the index of thirty industrial commodities".

Back Records:

The back records of the series in the new page S-10 are available from 1946 to date and are being mailed out to subscribers of the Review. They should be attached to the Annual Supplement 1961, Catalogue No. 11-206, forming page S-10 of that publication. As noted above, the series entitled "the index of thirty industrial commodities " on the new page S-10 is identical to the former series "Wholesale Price Indexes of Industrial Materials" on page S-8-7 of the Annual Supplement. Another series on page S-10 entitled "Price Indexes of Industrial Common Stocks" is similar to the series under the same name on page S-8-8 of the Supplement but it is now based on 1956 = 100 rather than the former base period 1935–39 = 100.

Annual Subscription: $5.00 — Single copies: 50c. each

This review and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications, may be ordered from the Information Services Division, Dominion Bureau of Statistics, Ottawa, Ontario, and remittances made payable to the Receiver General of Canada.

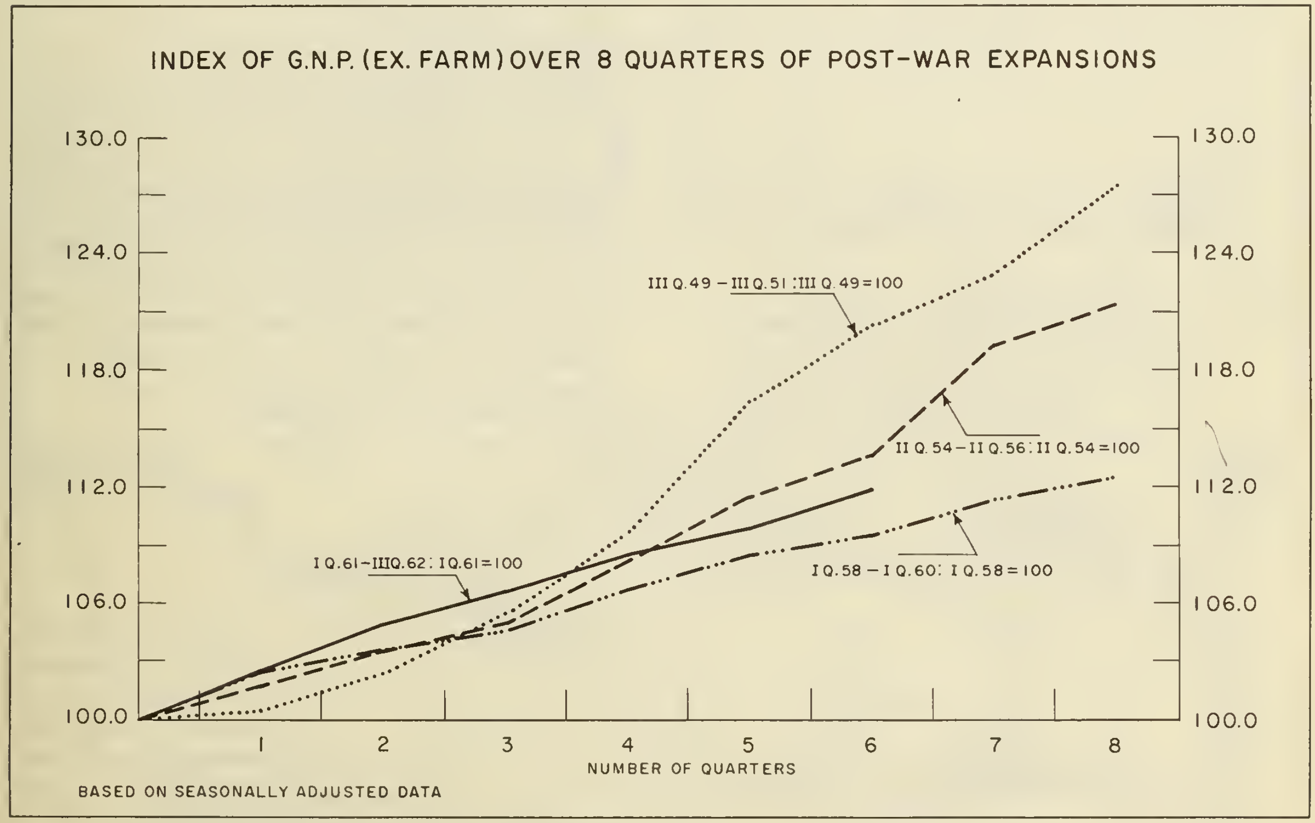
ROGER DUHAMEL, F.R.S.C., Queen's Printer and Controller of Stationery, Ottawa, 1963

INTRODUCTORY REVIEW

Gross National Product continued to advance in the third quarter of 1962, reaching a level of $40,256 million, seasonally adjusted at annual rates, 1.7 per cent higher than in the second quarter. A considerable part of this increase represented higher prices, so that the volume of production was up 1 per cent.

Since the first quarter of 1961, the trough prior to the current expansion, Gross National Product excluding agriculture, has increased 12 per cent, with quarter-to-quarter increases of 2.5, 2.3, 1.7, 1.8, 1.3, and 1.7 per cent. Six quarters from the trough the performance in the current expansion is better than the 9.5 per cent in the 1958-1959 expansion, but slightly less than the 13.7 per cent in the 1954-1955 expansion.

It is interesting to compare the pattern of developments in the current expansion with that of the expansion of 1958-1959. Business gross fixed capital formation moved forward in 1961-1962 as compared with little change in 1958 and 1959. Expenditures by governments were also stronger in the present upswing. In both expansions accumulation of inventories was important, but in 1958-1959, investment in business inventories played a much greater role. With a large gain in exports in 1961-1962 and a more moderate increase in imports the external sector made a strong positive contribution to the level of economic activity in the current expansion, unlike the situation in 1958-1959 when imports rose much more than exports. Consumer expenditure played a somewhat less important part in this 6 quarter expansion than in the same period of the previous expansion.



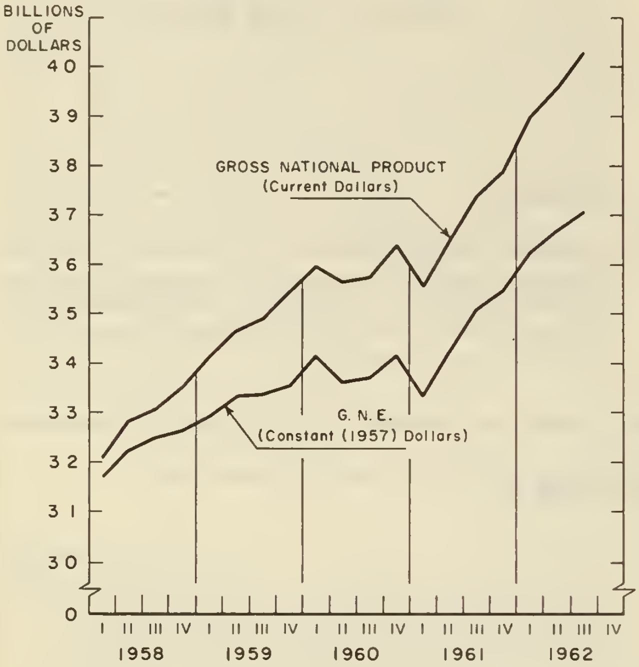
INDEX OF G.N.P. (EX. FARM) OVER 8 QUARTERS OF POST-WAR EXPANSIONS

BASED ON SEASONALLY ADJUSTED DATA

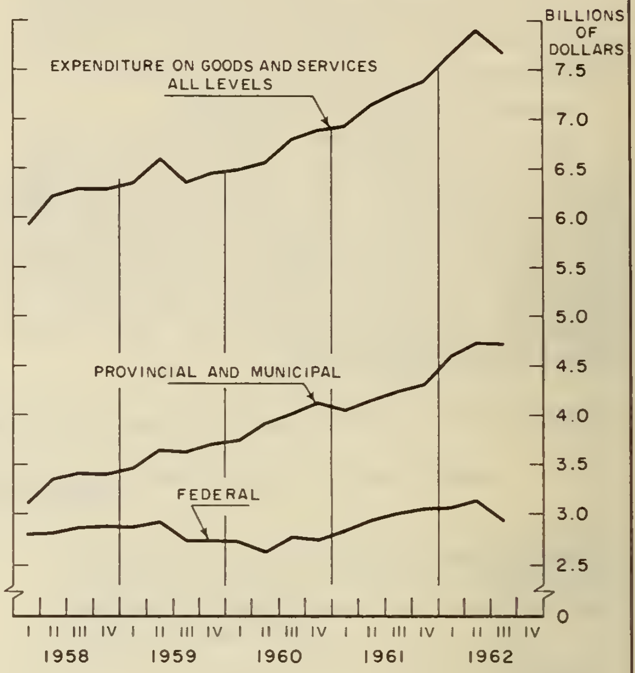
It may also be of interest to note that the per capita production in real terms in the second and third quarters of 1962 exceeded the previous high in the fourth quarter of 1956.

The accumulation of business inventories was the most important single factor raising the level of economic activity in the third quarter. Investment in business inventories rose at seasonally adjusted annual rates from only $60 million in the second quarter to over $700 million in the third. Further stimulus came from business gross fixed capital formation, with good gains in outlays for residential construction, largely reflecting the high rate of housing starts early in the year, and in machinery and equipment; outlays for non-residential construction were slightly lower. Exports of goods and services receded a little from their high second quarter level. Imports of goods and services fell more than exports so that on balance the external sector made a small contribution to the level of economic activity. There was a notable improvement in the deficit on invisibles, as payments declined and receipts were virtually unchanged. Government

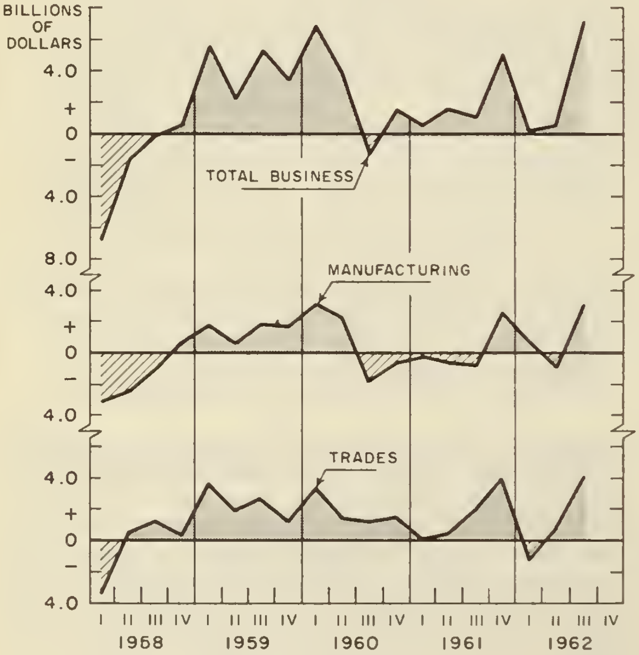
G.N.P. ROSE BY 1.7 PER CENT, OF WHICH ABOUT ONE-THIRD WAS ACCOUNTED FOR BY A PRICE INCREASE



THE DROP IN GOVERNMENT EXPENDITURE ON GOODS AND SERVICES WAS MAINLY CONCENTRATED AT THE FEDERAL LEVEL

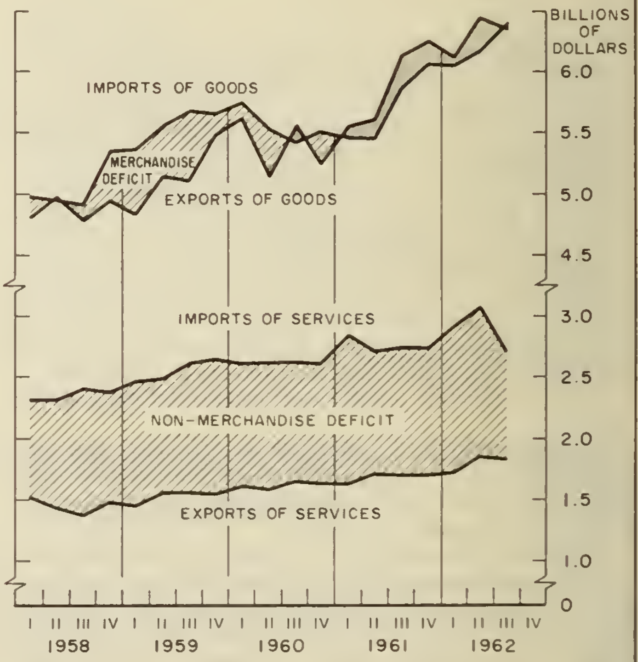


NON-FARM BUSINESS INVENTORIES SHOWED THE LARGEST ACCUMULATION SINCE THE FIRST QUARTER OF 1957



IN ALL CHARTS DATA ARE SEASONALLY ADJUSTED AT ANNUAL RATES

TOTAL DEFICIT ON CURRENT ACCOUNT REMAINED UNCHANGED WITH OFFSETTING MOVEMENTS IN THE COMPONENT ITEMS



expenditure on goods and services was moderately lower in total, with Federal outlays down considerably and a slight decline in provincial-municipal spending. There was a sharp drop in the combined government deficit, the major part of the decline being at the Federal level.

Turning to the income side, the salient developments in the third quarter were a further advance in labour income and a slight dip in corporate profits before taxes and before dividends paid abroad. However, dividends paid abroad were down sharply so that corporate profits for national income purposes, that is, after dividends paid abroad, were moderately higher.

National Income rose less than Gross National Product, largely because of the increase in indirect tax yields following the imposition of temporary import surcharges in June of this year. Personal income was slightly lower, reflecting the drop in Canadian Wheat Board payments to the farmers from the exceptionally high levels of the second quarter.

With three quarters data available it is possible to suggest orders of magnitude for the year as a whole. In the first three quarters of 1962, Gross National Product was running 8.8 per cent over the comparable period of 1961 and 7.5 per cent over the 1961 annual average. If there were no change between the third and fourth quarters, Gross National Product for 1962 would be 7.9 per cent above 1961. If one assumes, for example, a growth of 1 per cent in the fourth quarter, it would mean a Gross National Product 8.2 per cent over 1961.

[1] All comparisons except 3 quarters 1961 to 3 quarters 1962 are based on data seasonally adjusted at annual rates.

Price Movements

Approximately two-thirds of the 1.7 per cent increase in Gross National Product from the second to the third quarter of 1962 represented a gain in real terms. The increase of 0.7 per cent in the price component of Gross National Product compares with an increase of 0.3 per cent in the preceding quarter.

For the second consecutive quarter, the price component of personal expenditure advanced by a little over one-half of 1 per cent. As in the preceding quarter, much of the increase was attributable to food prices which, on a seasonally adjusted basis, advanced 1.1 per cent between the second and third quarters. The price index of gross fixed capital formation showed a moderate increase of 0.5 per cent, reflecting increases of 0.7 per cent for new residential construction and 0.5 per cent for machinery and equipment, with virtually no change in price for new non-residential construction. In contrast to the four preceding quarters, prices of exports and imports increased only fractionally. The changes in Gross National Product by value, volume and price are shown in the accompanying table.

Percent Changes — Current Dollars, Constant Dollars and Prices

[1] Implicit Price Indexes.

[2] Weighting shifts related to farm inventory change have affected the implicit price index for Gross National Expenditure on an unadjusted basis. The G.N.E. Laspeyres-type price index indicates that price change has been 1.3 per cent for this period.

DEVELOPMENTS IN THE THIRD QUARTER

Production and Employment

Seasonally adjusted, production both exclusive and inclusive of agriculture for the third quarter of 1962 increased in volume by 1 per cent over the previous quarter. Both the goods and service-producing industry groups also advanced by 1 per cent and contributed almost equally to the aggregate gain.

The mining and forestry industries advanced by about 2 per cent each, while manufacturing expanded by just over 1 per cent. The only component of the goods-producing industries to decline was construction, which decreased by almost 2 per cent.

The gain in manufacturing was preponderantly due to a 3 per cent increase in durables' output. The largest gain was in transportation equipment (6 per cent), reflecting considerably higher motor vehicle output (9 per cent). In line with this development was a 5 per cent advance in iron and steel products, concentrated mainly in the primary iron and steel and iron castings industries. With strong gains in both sawmills and veneer and plywoods output, wood products advanced by more than 3 per cent. There were only marginal movements in non-ferrous metal products, non-metallic mineral products and electrical apparatus and supplies.

Non-durable manufactures declined by one-half of 1 per cent during the quarter with foods and beverages (-3 per cent) and chemicals (-2 per cent) being the largest contributors to the decline. However, the latter group was strike-affected. Less than 1 per cent declines were recorded in leather products, clothing, printing and publishing and petroleum products. Increases of 2 to 3 per cent occurred in the rubber products, paper products, textiles and miscellaneous manufactures groups.

The increase in mining was concentrated in fuels (6 per cent), and non-metals (2 per cent). The 3 per cent drop in metal mining was the result of declines in both iron ore and nickel, partly offset by a gain in copper output.

Within the service-producing industries the transportation, storage and communication, the electric power and gas utilities, and the community, recreation, business and personal service industry divisions made the largest gains (2 per cent), each accounting therefore for a substantial portion of the 1 per cent increase in total service output. Transportation contributed more than two-thirds of the gain in transportation, storage and communication, with air transport showing a sharp upward movement and railway transport a slight decline. However, the bulk of the increase came from oil and gas pipeline transport. The community, recreation, business and personal service group continued its steady advance with the business and personal service industries showing the largest gain.

A fractional decline in the output of the retail trade industry was offset by a slight increase in wholesale trade. The finance, insurance and real estate group continued to expand, increasing by one-half of 1 per cent, while activity in the public administration and defence industries declined marginally.

When seasonal factors are taken into account employment was virtually unchanged in the third quarter. Unemployment averaged 6.0 per cent of the labour force compared with 5.8 per cent in the preceding quarter.

Personal Expenditure on Consumer Goods and Services

Personal expenditure advanced by half a per cent, continuing the moderate rate of increase evident in the previous quarter. In volume terms there was little change in this component. Most of the components showed a rate of increase larger than this, but two elements made a particular contribution to dampening the increase in this quarter — a decline of 12 per cent in the net purchases of automobiles, and a sharp decrease in the net expenditure abroad component of services, reflecting changes in the tourist and travel account with non-residents.

Expenditures on durables decreased by 7 per cent with purchases of cars falling from the high levels which had prevailed since the fourth quarter of last year. Among the other durables, purchases of furniture and home furnishings increased 1 per cent and 6 per cent respectively, while appliances and radios declined significantly.

Services increased by about half a per cent but, apart from net expenditure abroad, greater strength was widespread among almost all elements.

Expenditures on non-durable goods increased 2 per cent. Significant changes were in clothing and footwear (4½ per cent), gas, oil and grease (2½ per cent), and food (1 per cent), partially offset by alcoholic beverages (-6 per cent), and fuel (-3 per cent).

Business Gross Fixed Capital Formation

The expansion in fixed capital formation contributed toward the overall increase in the level of production in the quarter, with business adding $100 million to their annual rate of capital spending. Outlays on fixed capital rose from a rate of $6,868 million to $6,968 million, or by 1½ per cent after allowance for seasonal factors. The strength stemmed mainly from activity in the housing field, where there was a carry-over of work from the high numbers of dwellings started in the first quarter of the year, and from investment in machinery and equipment. Business spending on fixed capital in the third quarter represented 17.3 per cent of total gross national expenditure, maintaining a relatively stable proportion over the current upswing in business activity.

The value of residential construction during the quarter rose by 3½ per cent to an annual level of approximately $1,600 million, as the annual rate of completions of dwelling units rose from 115,000 to 126,000 in the third quarter, reflecting to some extent the high level of units started at the beginning of the year. This increase, together with indications of higher construction costs, more than offset the fall in the number of units started. Starts declined from an annual rate of 133,000 in the second quarter to 129,000 in the third quarter.

The annual rate of non-residential construction activity slowed from $2,760 million to $2,696 million after allowance for seasonal factors. Although a breakdown of this figure is not available, a large part of the more than 2 per cent drop appears to be in engineering-type construction work.

The estimate of outlays on machinery and equipment shows a 4 per cent increase over the second quarter, and a level of $2,680 million at annual rates seasonally adjusted. The estimate should be regarded as more tentative than usual in view of the fact that at the time of its preparation, no information on machinery imports was available. However, all indications point toward a strong upswing in the rate of spending, with domestic shipments of machinery 6 per cent higher, farm implement sales over 10 per cent higher, and the overall level of merchandise imports almost 4 per cent above the second quarter.

Investment in Non-Farm Business Inventories

The building up of inventories provided the largest single element to increasing economic activity in the third quarter. From the very low level of $60 million in the second quarter investment in non-farm business inventories rose to over $700 million in the third quarter at annual rates. Most of the stockbuilding took place in manufacturing and retail trade. Wholesale trade shifted from liquidation on a considerable scale to a moderate rate of accumulation. Other industries kept on re-stocking but at a reduced rate. The following table shows investment in non-farm business inventories in the first three quarters of the year.

Change in Non-Farm Business Inventories

(Seasonally adjusted at annual rates)

	1962		
	1Q.	2Q.	3Q.
	millions of dollars		
Manufacturing	88	- 92	304
Durables	- 60	16	156
Non-durables	148	- 108	148
Wholesale	- 48	- 132	40
Retail	- 76	220	364
Other industries	60	64	8
Grand totals	**24**	**60**	**716**

Among manufacturing industries there was a fairly widespread shift from liquidation to accumulation of inventories. Most of the fairly general increase in inventories in the non-durable lines occurred in the food and chemicals industries. Among durables there was a pronounced building up of stocks in the transportation equipment and iron and steel industries, partially offset by liquidation in the non-ferrous metal products and wood products industries. Stocks were built up at each stage of production with the increase being greatest in goods in process and in finished goods.

These developments in manufacturers' stocks took place against a background of rising production and more moderate increases in shipments. The ratio of stocks to shipments at the end of the quarter was a shade higher than at the end of the preceding quarter.

In wholesale trade, liquidation which took place in the first quarter and continued at an accelerated pace in the second, gave way to modest accumulation in the third. There were conflicting and offsetting movements among durables, so that the over-all accumulation took place in the non-durable lines. This accumulation slightly raised the ratio of stocks to shipments.

In retail trade, stockbuilding continued at an accelerated rate in the third quarter. The ratio of stocks to sales was higher in the third quarter.

Exports and Imports of Goods and Services

At an annual rate of $0.9 billion, the deficit on current account remained almost unchanged from the previous quarter, although important changes were taking place during the period in the factors contributing to this deficit. Total imports of goods and services declined by 1½ per cent to an annual rate of $9,128 million, seasonally adjusted, as a 12 per cent decline in payments for services more than offset the 4 per cent rise in merchandise imports. In exports the 1 per cent drop in level which reduced the seasonally adjusted annual rate to $8,212 million was primarily the result of a decline in merchandise exports.

The commodity detail, accounting for the increase in merchandise imports, is not yet available for the third quarter, but country of origin detail reveals that about 85 per cent of the increase was in imports from the United States and the United Kingdom.

The reduction of 12 per cent in service payments was brought about by lower payments in all categories. The sharpest reductions occurred in the outflow of interest and dividend payments which declined by 18 per cent from the unusually high second quarter level, in payment for miscellaneous current services which fell by 11 per cent and in Canadian residents' travel expenditures abroad which were reduced by 14 per cent.

Exports and Imports of Merchandise and Services

(Seasonally adjusted at annual rates)

	1Q'61	2Q'61	3Q'61	4Q'61	Annual	1Q'62	2Q'62	3Q'62
	millions of dollars							
Exports	7,184	7,316	7,856	7,956	7,578	7,836	8,320	8,212
Merchandise	5,564	5,608	6,156	6,256	5,896	6,112	6,460	6,376
Services	1,620	1,708	1,700	1,700	1,682	1,724	1,860	1,836
Imports	8,344	8,184	8,608	8,812	8,487	8,964	9,268	9,128
Merchandise	5,476	5,464	5,856	6,072	5,717	6,048	6,184	6,408
Services	2,868	2,720	2,752	2,740	2,770	2,916	3,084	2,720
Balance:								
Total	- 1,160	- 868	- 752	- 856	- 909	- 1,128	- 948	- 916
Merchandise	88	144	300	184	179	64	276	- 32
Services	- 1,248	- 1,012	- 1,052	- 1,040	- 1,088	- 1,192	- 1,224	- 884

Merchandise exports declined a little over 1 per cent from the record second quarter level. The declines were fairly general but particularly notable in exports of wheat and iron ore. Exports of non-ferrous metals were higher as nickel and aluminum increased and copper exports remained at the high level of the previous quarter. Exports of goods to the United States declined by 2 per cent, increased by over 1 per cent to the United Kingdom and fell by 10 per cent to all other countries combined.

Receipts for services changed little from the previous quarter. A reduction of just over 1 per cent in receipts was mainly due to a 4 per cent drop in receipts on non-residents' travel expenditures in Canada. Receipts on travel account were, however, much higher than in the same quarter last year.

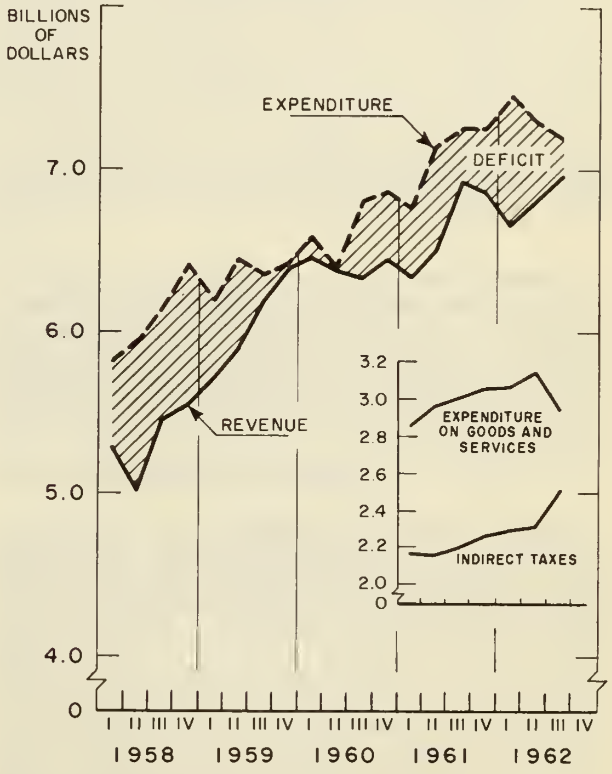
The Government Sector

The combined deficit for all levels of government declined 34 per cent from $988 million in the second quarter to $656 million in the third quarter of 1962, seasonally adjusted at annual rates. There was a drop of 50 per cent at the Federal level and of 18 per cent at the provincial-municipal level. This improvement was the result at the Federal level of an increase of revenue coupled with a decrease in expenditure between the two quarters and at the provincial-municipal level of the increase in total revenue exceeding the increase in total expenditure.

Seasonally adjusted, there was a small decline in total expenditure by all levels of government in the third quarter of 1962 over the previous quarter, with a decline of 1.3 per cent at the Federal level exceeding the 1 per cent increase in provincial-municipal outlays.

FEDERAL GOVERNMENT REVENUE, EXPENDITURE, AND SELECTED COMPONENTS

(SEASONALLY ADJUSTED DATA AT ANNUAL RATES)



Although Federal transfer payments to the other levels of government rose by almost 10 per cent, seasonally adjusted, mainly because of increases in contributions to the provinces under the Hospital Insurance and Diagnostic Services Act and in respect of vocational training, this was exceeded by a drop in expenditure on goods and services. The changes at the provincial-municipal level were insignificant.

There were gains in revenue, seasonally adjusted, from personal direct taxes at all levels of government, principally due to increases in receipts from personal income taxes. Federal indirect taxes rose by 8.7 per cent because of the increased revenue from customs import duties and excise taxes brought about, in the main, by the imposition on June 24, 1962, of the temporary surcharges on certain classes of imports.

Labour Income

The seasonally adjusted estimate of labour income rose by 0.7 per cent from the second to the third quarter of 1962. The increase was the smallest quarter-to-quarter rise recorded since 1960.

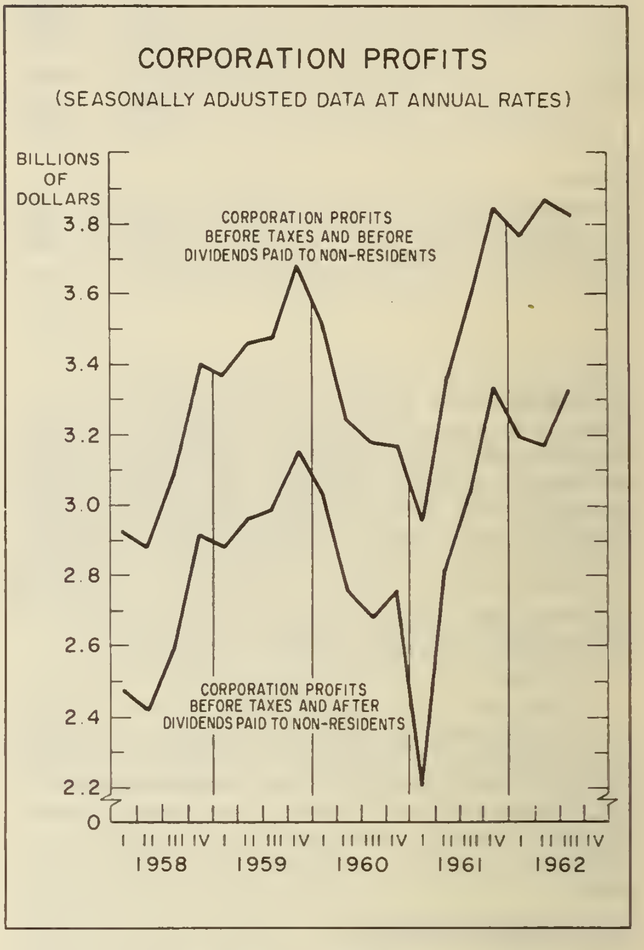
The seasonally adjusted estimate of wages and salaries also rose by 0.7 per cent from the second to the third quarter of the year. In the previous ten years, gains of this magnitude had been associated with declines in wages and salaries in the goods-producing industries. However, from the second to the third quarter of 1962, the figure for these industries advanced by 0.5 per cent. The moderate size of the over-all wage and salary gain in part reflects an unusually small rise in the service-producing industries. The gain of 0.9 per cent in this area, although significant, was one of the smallest for the last decade. The relatively small size of the gain in part reflected the stability of the seasonally adjusted wage and salary total for government service, which in most recent years has shown substantial gains from quarter to quarter.

Precise information on the influence of labour price increases on labour income is not available. However, it is known that some wage rate increases occurred in the summer months. Taking these into account, the fact that wages and salaries in goods-producing industries rose by only 0.5 per cent suggests that there was little increase in the volume of labour used in this segment of the economy.

Gains in trade and transportation, communication and other utilities approximated the over-all gain of 0.9 per cent estimated for the service-producing sector as a whole. The 0.8 per cent rise for trade was down sharply, as a rise of 2.1 per cent occurred from the first to the second quarter. Wages and salaries in government service did not change significantly over the quarter, as previously noted. However, the figure for finance and non-government service continued to climb, with combined wages and salaries for these two industry divisions gaining by 1.4 per cent between the second and third quarters of the year.

Corporation Profits

Following an increase from the first to the second quarter of 1962, corporation profits (before taxes and before dividends paid to non-residents) showed a slight drop of 1 per cent in the third quarter of 1962, to a seasonally adjusted annual rate of $3.8 billion. However, profits remained at a new record level, 29.5 per cent above the cyclical trough in the first quarter, 1961.



The main industries contributing to the decline were: mines, quarries and oil wells; finance, insurance and real estate; and retail trade. The manufacturing, and transportation, storage and communication groups partly offset the decline.

Within manufacturing, increases were recorded in metal industries (including transportation equipment), non-metallic mineral products, food and beverages, wood, paper, and chemical products industries. Slight declines were noticed in petroleum and coal products, textile, and printing, publishing and allied industries.

Dividends paid to non-residents declined substantially by about 26 per cent, so that corporation profits before taxes and after dividends paid abroad increased by about 4 per cent.

Changes in Corporation Profits — Selected Industries

	2nd Quarter 1962 to 3rd Quarter 1962 (Seasonally adjusted)	3 Quarters 1961 to 3 Quarters 1962 (Unadjusted for seasonal variation)
	per cent	
Mines, quarries and oil wells	- 16.5	20.3
Manufacturing industries	6.4	19.8
Food and beverage industries	7.9	8.4
Rubber industries	- 16.7	- 6.2
Textile industries	- 11.1	11.1
Wood industries	13.0	26.2
Paper and allied industries	5.3	17.7
Printing, publishing and allied industries	- 11.1	14.0
Metal industries (including transportation equipment)	12.7	32.0
Electrical products industries	5.6	54.5
Non-metallic mineral products industries	26.3	28.9
Petroleum and coal products industries	- 10.3	6.7
Chemical and chemical products industries	11.8	18.8
Other manufacturing industries	- 5.9	8.5
Transportation, storage and communication	9.0	3.5
Electric power, gas and water utilities	4.8	8.2
Wholesale trade	—	- 2.0
Retail trade	- 12.3	17.9
Finance, insurance and real estate	- 9.7	6.8
Community, business and personal service industries	5.9	7.8
Other non-manufacturing	- 8.3	4.9
Total all industries	**- 1.0**	**13.9**

Rent, Interest and Miscellaneous Investment Income

Rent, interest and miscellaneous investment income dropped by about 2 per cent from the second quarter 1962 to the third quarter 1962 after adjustment for seasonal factors, chiefly because of a fall in profits of Federal government business enterprises and withholding taxes on interest and dividends paid to non-residents.

Farm Income

Accrued net income of farm operators from farm production rose 2.5 per cent, seasonally adjusted, from the second to the third quarter of 1962. Record levels were attained in cash receipts from the sale of grain and livestock products, resulting from increases in the production of both of these items. Offsetting these increases were declines in cash income from the sale of other products, particularly tobacco, and in the profits of the Canadian Wheat Board.

Seasonally adjusted, net income received by farm operators from farm production, a component of personal income, declined 23 per cent in the third quarter. The decrease can be explained by the sharp drop in the Canadian Wheat Board payments from the irregularly high level of the second quarter.

Non-Farm Unincorporated Business

Net income of non-farm unincorporated business, seasonally adjusted, increased 3 per cent in the third quarter over the second quarter rate. Gains were registered in about half of the industry groups with the other industrial groupings remaining unchanged.

THE FIRST THREE QUARTERS OF 1962

As already mentioned, Gross National Product in the first three quarters of 1962 was running 8.8 per cent above the comparable period of 1961. Although all of the components of Gross National Product and Expenditure showed significant increases, an important feature in the comparison is the very much higher crop estimate in 1962 relative to the poor crop in the previous year.

The price component of Gross National Expenditure increased by somewhat over 1 per cent, on a year-over-year basis, as compared with an increase of 0.7 per cent between the year 1960 and the year 1961. Prices of both exports and imports rose sharply, the increases being associated with declines in the exchange rate that occurred in mid-1961 and again in the spring of 1962. Machinery and equipment, which has a high import content, also showed a significant increase in price. The price component of personal expenditure increased by 1.1 per cent as compared with an increase of 0.9 per cent between 1960 and 1961.

Production and Employment

A comparison of the seasonally unadjusted production data for the first three quarters of 1962 with the corresponding data for 1961, reveals a somewhat less than 8 per cent increase in volume. This increase is reduced to about 6 per cent by the exclusion of agriculture. Similarly, the 10 per cent advance in the total goods-producing industries is reduced to about 7½ per cent by the exclusion of agriculture.

Among the other goods-producing industries both mining and manufacturing advanced by 9 per cent with the durables component of manufacturing showing the largest gains (12 per cent). This increase was probably largely a result of the recovery of the more cyclically volatile industries from the 1960-1961 cycle which troughed in the first quarter of 1961. Construction increased by 4 per cent.

The service-producing industries increased by over 4 per cent. Higher than average output increases occurred in the electric power and gas utility and in the more cyclically sensitive trade and transportation, communication and storage industry groups. The remaining service industry divisions continued to expand, showing an increase of approximately 3 per cent each.

Associated with the gain in production in the first nine months' comparison was a 3.2 per cent increase in employment. Agriculture was the only major industry to show a decline in employment. As in the recent past there were better gains in employment in the service-producing industries than in the goods-producing industries. The service group — public, community and recreational, and other services — with an advance of 5.5 per cent showed the largest increase of all the industries. In the nine months' comparison unemployment in 1962 averaged 6.1 per cent of the labour force compared with 7.8 per cent in the like period of 1961. The distribution of employment by industry is shown in the accompanying table.

Employment by Industry[1]

	First nine months averages (Estimated in thousands)		Per cent change
	1961	1962	
Total employed	6,014	6,205	3.2
Males	4,354	4,482	2.9
Females	1,660	1,723	3.8
Goods-producing industries	2,756	2,827	2.6
Agriculture	683	667	- 2.3
Other primary industries	174	176	1.1
Manufacturing	1,501	1,563	4.1
Construction	398	421	5.8
Service-producing industries	3,258	3,378	3.7
Transportation and other utilities	511	525	2.7
Trade	976	991	1.5
Finance, insurance and real estate	239	246	2.9
Service	1,532	1,616	5.5

[1] Includes unpaid workers and self-employed persons.

Personal Expenditure on Consumer Goods and Services

During the first three quarters of the year, personal expenditure increased 5 per cent over the first three quarters of 1961. This is 1 per cent more than is shown by similar comparisons for the two previous years.

All the major groups shared in the increase. The largest gain, 7 per cent, was registered by durable goods. This was in contrast to 1961 and 1960 which showed no change and -2 per cent respectively in similar three quarters comparisons. The largest contribution came from a 13 per cent advance in the net purchases of new and used cars.

Expenditures on non-durables increased 5½ per cent. Gains were widespread among individual items, with the increase in expenditure resulting from the introduction of the Ontario sales tax being significant.

Services rose 4½ per cent for the three quarters' comparison. Most of the larger items registered increases of 5 per cent or more. These were dampened by a large drop in net expenditure abroad.

The changes in consumer expenditure between 1961 and 1962 are shown in the accompanying table.

Consumer Expenditure

	Per cent change	
	Year 1960 to Year 1961	3 Quarters 1961 to 3 Quarters 1962
Food	1.8	2.8
Clothing	1.6	3.6
Other	7.3	9.7
Total non-durable goods	3.8	5.4
Appliances and radios	2.7	- 1.0
Home furnishings and furniture	2.1	4.1
Autos (new and used)	0.4	12.9
Other	- 1.2	0.6
Total durable goods	1.0	7.2
Total all goods	3.2	5.8
Total services	4.7	4.5
Total personal expenditure (goods and services)	3.8	5.3

Business Gross Fixed Capital Formation

Looking at the levels of business fixed capital formation for the first three quarters of the year, the total shows an increase of 7 per cent over the same period one year ago, 1 per cent higher than the anticipations for the full year 1962 released in the mid-year review, "Private and Public Investment in Canada—Outlook 1962". A breakdown of the total for the same period shows new residential construction 7 per cent ahead, non-residential construction higher by 4 per cent and machinery and equipment almost 10 per cent higher. These figures compare with the anticipations for the full year of 4½ per cent, 1 per cent and 12 per cent respectively.

Non-Farm Business Inventories

A comparison of the investment in inventories during the three quarters of this year with the same quarters of last year, reveals that, at the total level, investment in inventories increased by about $128 million. This increase was entirely due to the substantial positive turn-around of the present third quarter.

By industry, manufacturing and retail inventories accounted for the above increase. Wholesale inventories were reduced. The other industries showed virtually no change.

Exports and Imports of Merchandise and Services

A comparison of the first nine months of 1962 with the comparable period one year ago reveals total exports to be almost 9 per cent higher, with almost equal relative gains in both merchandise and services. Imports increased by a little over 9 per cent, with more than an 11 per cent increase in merchandise and almost 5 per cent in services.

Crude petroleum and iron ore are outstanding among the commodities showing higher sales but there were good gains in aluminum products, lumber and timber, woodpulp, nickel and copper. Declines were registered by uranium ores and concentrates, wheat and newsprint. In the case of imports, automobiles and parts, non-farm machinery and electrical apparatus were prominent among the commodities which were higher in 1962. Something less than one-half of the increases on both sides of trade was ascribable to higher export and import prices, a reflection of the change in the foreign exchange value of the Canadian dollar. The changes in exports by leading commodities and leading countries are shown in the accompanying table.

Domestic Exports

	Jan.-Sept. 1961	Jan.-Sept. 1962	Per cent change
		thousands of dollars	
Leading commodities:			
Newsprint paper	561,749	546,506	- 2.7
Wheat	464,303	414,950	- 10.6
Lumber and timber	266,182	300,877	+ 13.0
Woodpulp	255,496	275,601	+ 7.9
Nickel	234,657	248,880	+ 6.1
Aluminum and products	181,044	212,727	+ 17.5
Copper and products	150,472	157,662	+ 4.8
Uranium ores and concentrates	150,207	126,206	- 16.0
Petroleum, crude	108,519	174,377	+ 60.7
Fish and fishery products	100,220	111,853	+ 11.6
Asbestos and products	92,144	95,236	+ 3.4
Iron ore	98,888	169,754	+ 71.7
Farm machinery and implements	66,856	66,417	- 0.7
Leading countries:			
United States	2,236,186	2,667,117	+ 19.3
United Kingdom	662,789	660,033	- 0.4
European Common Market	341,267	300,158	- 12.0
Japan	172,232	158,930	- 7.7
Other	750,722	711,717	- 5.2
Total domestic exports	**4,163,196**	**4,497,955**	**+ 8.0**

Between the first three quarters of 1961 and the first three quarters of 1962 the deficit on invisibles narrowed a little. A decline of the deficit on travel account was partially offset by larger net payments on freight, interest and dividends and business services.

The surplus on merchandise trade was cut from some $109 million to some $8 million and the deficit on invisibles declined from $775 million to $762 million. Thus the total deficit rose from $666 to $754 million.

The Government Sector

Data for the first three quarters of 1962 compared with the same period of 1961 showed a 12 per cent decrease in the deficit of all levels of government, with the increase at the Federal level being more than offset by the decrease at the provincial-municipal level. The change at the Federal level was due to expenditure increasing to a greater extent than did revenue. At the provincial-municipal level, revenues advanced because of the overlapping of the old and new tax arrangements at the beginning of 1962 and because of increased retail sales tax and real property tax revenues.

Labour Income

In the comparison of the first nine months of 1962 with the same period of 1961, labour income rose by 6.5 per cent. The increases for manufacturing, which is the largest industry in the goods-producing group, was 7.8 per cent. A gain of 7.2 per cent was recorded in the finance, service and government grouping. However, gains in the remaining goods-producing industries were larger than those in the rest of the service-producing industries, and in consequence the over-all rise for goods-producing industries (7.6 per cent) exceeded that for service-producing industries (5.8 per cent).

Corporation Profits

In a comparison of the first three quarters of 1962 with the same period of 1961, corporation profits rose by about 14 per cent reflecting the record levels maintained during this year. The chief industries contributing to this increase were: manufacturing; mines, quarries and oil wells; retail trade; and finance, insurance and real estate groups. Higher profits were experienced by all industry groups except wholesale trade which showed a negligible decline.

Dividends paid to non-residents declined by about 5 per cent and corporation profits before taxes and after dividends paid abroad rose substantially by about 18 per cent.

Rent, Interest and Miscellaneous Investment Income

In the first three quarters of this year, rent, interest and miscellaneous investment income was about 5 per cent higher than in the same period of 1961. All components contributed to the increase except withholding taxes on interest and dividends paid abroad.

Farm Income

Accrued net income of farm operators from farm production increased sharply in the first three quarters of 1962 compared with the same period of 1961. Most of this increase can be attributed to the value of the 1962 grain crop, now estimated to be approximately $560 million higher than the 1961 crop. However, cash receipts from the sale of grains declined, a reflection of the low crop production of last year. This was partially offset by increased receipts from the sale of livestock products resulting from the higher livestock prices during 1962.

Non-Farm Unincorporated Business

In a comparison of the first three quarters of 1962 with the first three quarters of 1961, net income of unincorporated non-farm business increased 8 per cent. The largest increase was in net income from retail trade with the other industries showing smaller increases or remaining flat.

INDUSTRIAL PRODUCTION (More detail in Table 11)

Industrial production was virtually unchanged in October with slight gains in both mining and electric power and gas utilities being mostly offset by a small drop in manufacturing output.

		total industrial production	manufacturing production			mining production	electricity and gas	total iron and steel
			total	durables	non-durables

RETAIL TRADE, MOTOR VEHICLE SALES (More detail in Tables 47 and 75)

Retail trade remained virtually unchanged in October but conflicting trends appeared in its components. Increases in both motor vehicle dealers and shoe stores were for the most part counterbalanced by declines registered in department and clothing stores. Total new motor vehicle sales rose sharply in October due to major gains in American passenger and total commercial sales.

		retail trade total	retail trade (ex. motor vehicle dealers)	motor vehicle dealers	department stores	new motor vehicle sales			
						total	American type passenger	European type passenger	total commercial

MANUFACTURING INVENTORIES, SHIPMENTS, ORDERS (More detail in Tables 35 and 36)

In October, manufacturing inventories declined for the first time in the last eighteen months. Both total shipments and new orders were also lower during the same month. New orders in machinery registered an 8% drop and shipments of primary iron and steel increased more than 8%.

	all industries

SELECTED MONTHLY SERIES (More detail in Tables 12, 26, 27, 29, 79 and 87)

Average hourly earnings in manufacturing stood at $1.91 in October, unchanged from the previous month while the average work week declined further.

Total labour income reversed its previous loss of $2 million in September with a gain of $9 million in October.

SELECTED QUARTERLY SERIES (More detail in Tables 6, 10, 60, 61, 66, 79 and 101)

Gross National Product continued to advance in the third quarter reaching a level of $40.3 billion, 1.7% higher than the revised second quarter and 7.6% more than the third quarter of 1961. Following an increase from the first to the second quarter of 1962, corporation profits before taxes and before dividends paid to non-residents had a slight drop of 1% in the third quarter.

---

[1] Gross National Product at market prices excluding accrued net income of farm operators from farm production.
[2] Before dividends paid to non-residents.
[3] Original data as in column 8, Table 79.

PRICES

The consumer price index rose 0.3% from 131.5 to 131.9 between October and November. The November index was 1.7% above the same month of last year. Higher indexes for food, housing, clothing, transportation, recreation and reading offset lower indexes for health and personal care, and tobacco and alcohol. Preliminary estimates indicate that wholesale prices edged up 0.3% in November as a result of higher prices for vegetable and textile products.

[1] Prior to the census in 1961, population estimates were made quarterly on March 1, June 1, September 1 and December 1, and in addition on July 1 and January 1 of each year. After the 1961 census the quarterly estimates will be made on January 1, April 1, July 1 and October 1, as well as June 1. **Source: Estimated population of Canada by provinces at June 1, 1962 (91-201) D.B.S.**

---

[1] Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. [2] Includes residual error of estimate. Source at bottom of Table 10.

Table 7: gross national expenditure in current dollars

[1] The statistics for individual industries exclude strikes involving less than 100 workers. The total for all industries continues to include all strikes.
[2] The annual and monthly "all industries" totals for 1960 and 1961 have been revised and are no longer quite comparable with the data for individual industries, apart from the difference described in footnote 1. **Source: Labour Gazette, Department of Labour.**

[1] The data in Tables 17 to 27 are based on reports from employers usually employing 15 persons and over and covering the respondents last pay period(s) in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and domestic service. [3] Includes storage and communication. [4] Includes insurance and real estate. [5] Excludes public administration and defence and such community services as health and education. **Source: Employment and Payrolls, (72-002), D.B.S.**

---

[1] See footnote 1, Table 17. [2] See footnote 2, Table 17. [3] Employment indexes in manufacturing and in its durable and non-durable components are given in Table 17. [4] In addition to those listed, tobacco products, leather, printing and publishing and miscellaneous industries are included in non-durable manufacturing.

[1] Monthly shipments represent an estimated projection of the latest available Census of Industry values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total manufacturing inventory owned by manufacturers including warehouse stocks. [3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [4] End of period. [5] Classified according to the Standard Industrial Classification. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.**

[1] Releases of domestically manufactured tobacco for consumption in Canada. [2] End of period. [3] The production of beer is shown in thousand barrels of 25 gallons each. [4] Includes bottling of imported liquors. **Sources: Quarterly Stocks and Consumption of Unmanufactured Tobacco, (32-014), D.B.S., Department of National Revenue.**

[1] Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Excluding shipments for re-processing at maker's own plants. [3] Imports include, in addition to all other shapes, ingots, cast iron pipe, wire and wire ropes. Imports exclude castings (except cast iron pipe), forgings, fittings and couplings. **Source: Primary Iron and Steel (41-001), D.B.S.**

[1] These totals include all generating agencies producing over ten million kilowatt hours per year. [2] These columns include all generating utilities and generating industries respectively, producing over ten million kilowatt hours per year. [3] Less imports. [4] Total net generation less net exports. [5] Mainly the amount used in electric boilers. **Source: Electric Power Statistics, (57-001), D.B.S.**

[1] Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area. [2] The data on building pemits are collected for 1,100 municipalities and individual figures are available on request. Some of the annual totals for 1960 and 1961 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. **Source: Building Permits (64-001), D.B.S.**

[1] The coverage was extended to 507 municipalities in 1948, and as of 1961, stands at 1,100, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. **Source: Building Permits (64-001), D.B.S.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D.B.S.**

[1] Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected. [2] Planks and boards, flooring and square timber. [3] Hollow blocks including fireproofing and load-bearing tile. [4] For building insulation only. [5] Figures cover the production of firms which normally account for 90 per cent of the total for Canada. [6] Includes concrete chimney blocks, up to December 1959. [7] Factory sales of firms which normally account for 96% of total Canadian production. **Source: Concrete Products (44-002), Products made from Canadian clays (44-005), Asphalt Roofing (45-001), Rigid Insulating Board (36-002), Iron Castings and Cast Iron Pipes and Fittings (41-004), Steel Wire and Specified Wire Products (41-006), Gypsum Products (44-003), Mineral Wool (44-004), Sales of Paints, Varnishes and Lacquers (46-001) and Trade of Canada, Imports (65-007), Exports (65-004), D.B.S.**

*See also Tables 29 and 30. [1] Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1961 are final prices. From August 1, 1961 to date, the western grain prices used in the index are initial prices only for wheat, oats and barley. [2] Includes subsidy on hogs. [3] Based on price for hogs including Dominion premium up to September 1960. A rise in ratio favours production of beef. [4] Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights. **Source: Coarse Grains Quarterly (22-001), Stocks of Meat and Lard (32-012), Index Numbers of Farm Prices of Agricultural Products (62-004), Livestock and Meat Trade Report, Dept. of Agriculture, D.B.S.**

[1] Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Revised to include bagged seed wheat previously excluded. [2] Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. [3] Annual data are monthly averages of crop year. [4] Includes eggs for hatching.

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted. [2] Includes stocks held by manufacturers, wholesalers and other warehouses. [3] The increase in percentage of capacity from October to November, 1960 reflects the fact that some mills worked more than the 25 days included in this formula as well as a reduction in total daily capacity from 171,000 hundredweight in October to 151,000 hundredweight in November. **Source: Grain Milling Statistics (32-003), Margarine Statistics (32-005), Quarterly Report on Processed Foods (32-007), D.B.S.**

---

[1] Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. [2] Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade. **Source: Retail Trade (63-005), D.B.S.**

Table 75: value of retail trade by types of business and provinces

[1] Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available. [2] Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. [3] Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. [4] Excluded from the above tabulation are charge accounts of motor vehicle dealers whose credit is extended mainly to businesses rather than to consumers. Instalment credit includes conditional sales agreements only. [5] Amount owing to oil companies, excluding commercial accounts. [6] Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds. [7] Figures for dates other than year ends are estimated on the basis of the loans by twelve companies. **Source: Department of Finance, Department of Agriculture, Bank of Canada.**

[1] As from January 1958 the indexes, the imports total and the "miscellaneous commodities" total exclude various non-commercial and special transactions previously included in our imports totals. For a more detailed explanation see Trade of Canada (Exports) 1960. [2] Includes pigs, ingots, blooms and billets, castings and forgings, ferro-alloys and rolling mill products. **Source: Trade of Canada, Imports (65-007), D.B.S.**

[1] Data in this table refer to railways with annual operating revenues of $500,000 or over. Monthly averages for 1960 and 1961 differ from the sum of the monthly data due to revisions which cannot be allocated by months. [2] Includes January to July interim payments related to recommendations of the Royal Commission on Railway Transportation. **Source: Railway Operating Statistics (52-003) monthly, (52-206) annual, D.B.S.**

[1] Revised series with coverage limited to business failures under the Bankruptcy and Winding Up Acts, excluding individuals not operating businesses as such. [2] In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commercial Failures (61-002), D.B.S.**

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and undivided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [6] Excluding Canadian day to day loans. [7] Loans to grain dealers and exporters. [8] Loans to finance purchase of Canada Savings bonds at time of issue. [9] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. [10] Including loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

[1] Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks. [2] Subsidiary coin issued by the Mint less coin held by Bank of Canada and chartered banks in Canada. [3] Less total float, i.e. cheques and other items in transit (net). [4] At September 30, 1957, the deposit balances of religious, educational and welfare institutions used for business purposes, about $140 million, were reclassified from "personal savings deposits" to "other notice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date. **Source: Statistical Summary of Bank of Canada.**

Note: This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales. [1]The Canada totals by months for 1960 and 1961 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1960 and 1961 nor the monthly averages for 1961 have been revised to agree with the Canada total. **Source: Monthly Survey of Life Insurance Sales in Canada, Life Insurance Agency Management Association, Hartford, Conn.**

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (Excluding government-owned companies and incorporated co-operatives).

[1] Includes Tobacco, Leather and Miscellaneous Manufacturing Industries.
[2] Includes Electric Power, Gas and Water Utilities.
[3] Includes Community, Business and Personal Service Industries.
[4] Includes Agriculture, Forestry, Fishing and Construction.
